Fawtir mobile: credit notes and debit notes

Sep 30, 2026 · @Rixon

Purpose

A credit note lowers what a customer owes on an issued invoice. A debit note charges them more on it. Both are always started from an issued invoice, carry its reference, and go to the Tax Authority like the invoice did. The mobile app must collect the same data, apply the same rules and call the same APIs as the web app. The screenshots below show the web screens, so you can see what each part does. Your layout on mobile is your call.

	Credit note	Debit note
Use it when	goods came back, a price was too high, an order was cancelled, a VAT mistake	an invoice was under-billed, a price was too low, extra quantity
Effect on the invoice	reduces what is owed; any excess becomes a refund due	adds a new amount, paid on its own
PINT-OM document type	381	383
Money on screen	shown as a minus, in red	shown as a plus

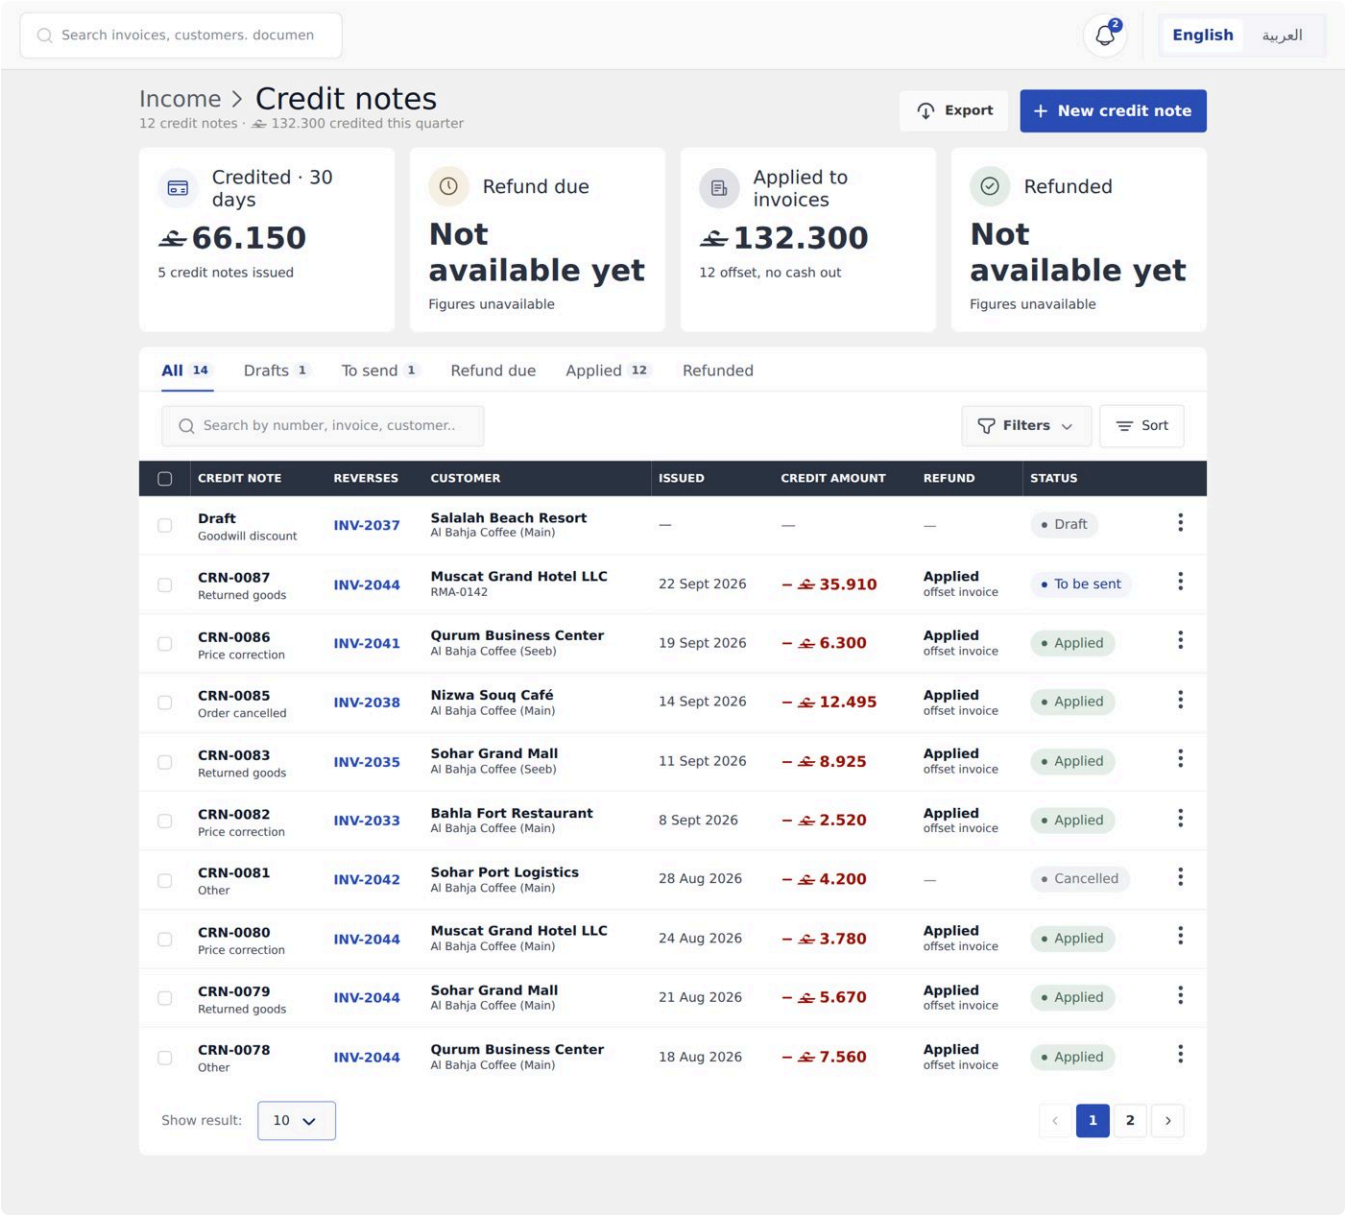

Rules are from PINT-OM (Oman rules); rule IDs are cited where they apply. Money is always three decimals with the Omani rial sign. Every label exists in English and Arabic.

Web routes: credit notes `/income/credit-notes` (list), `/income/credit-notes/new` (create), `/income/credit-notes/:id` (detail); debit notes the same under `/income/debit-notes`.

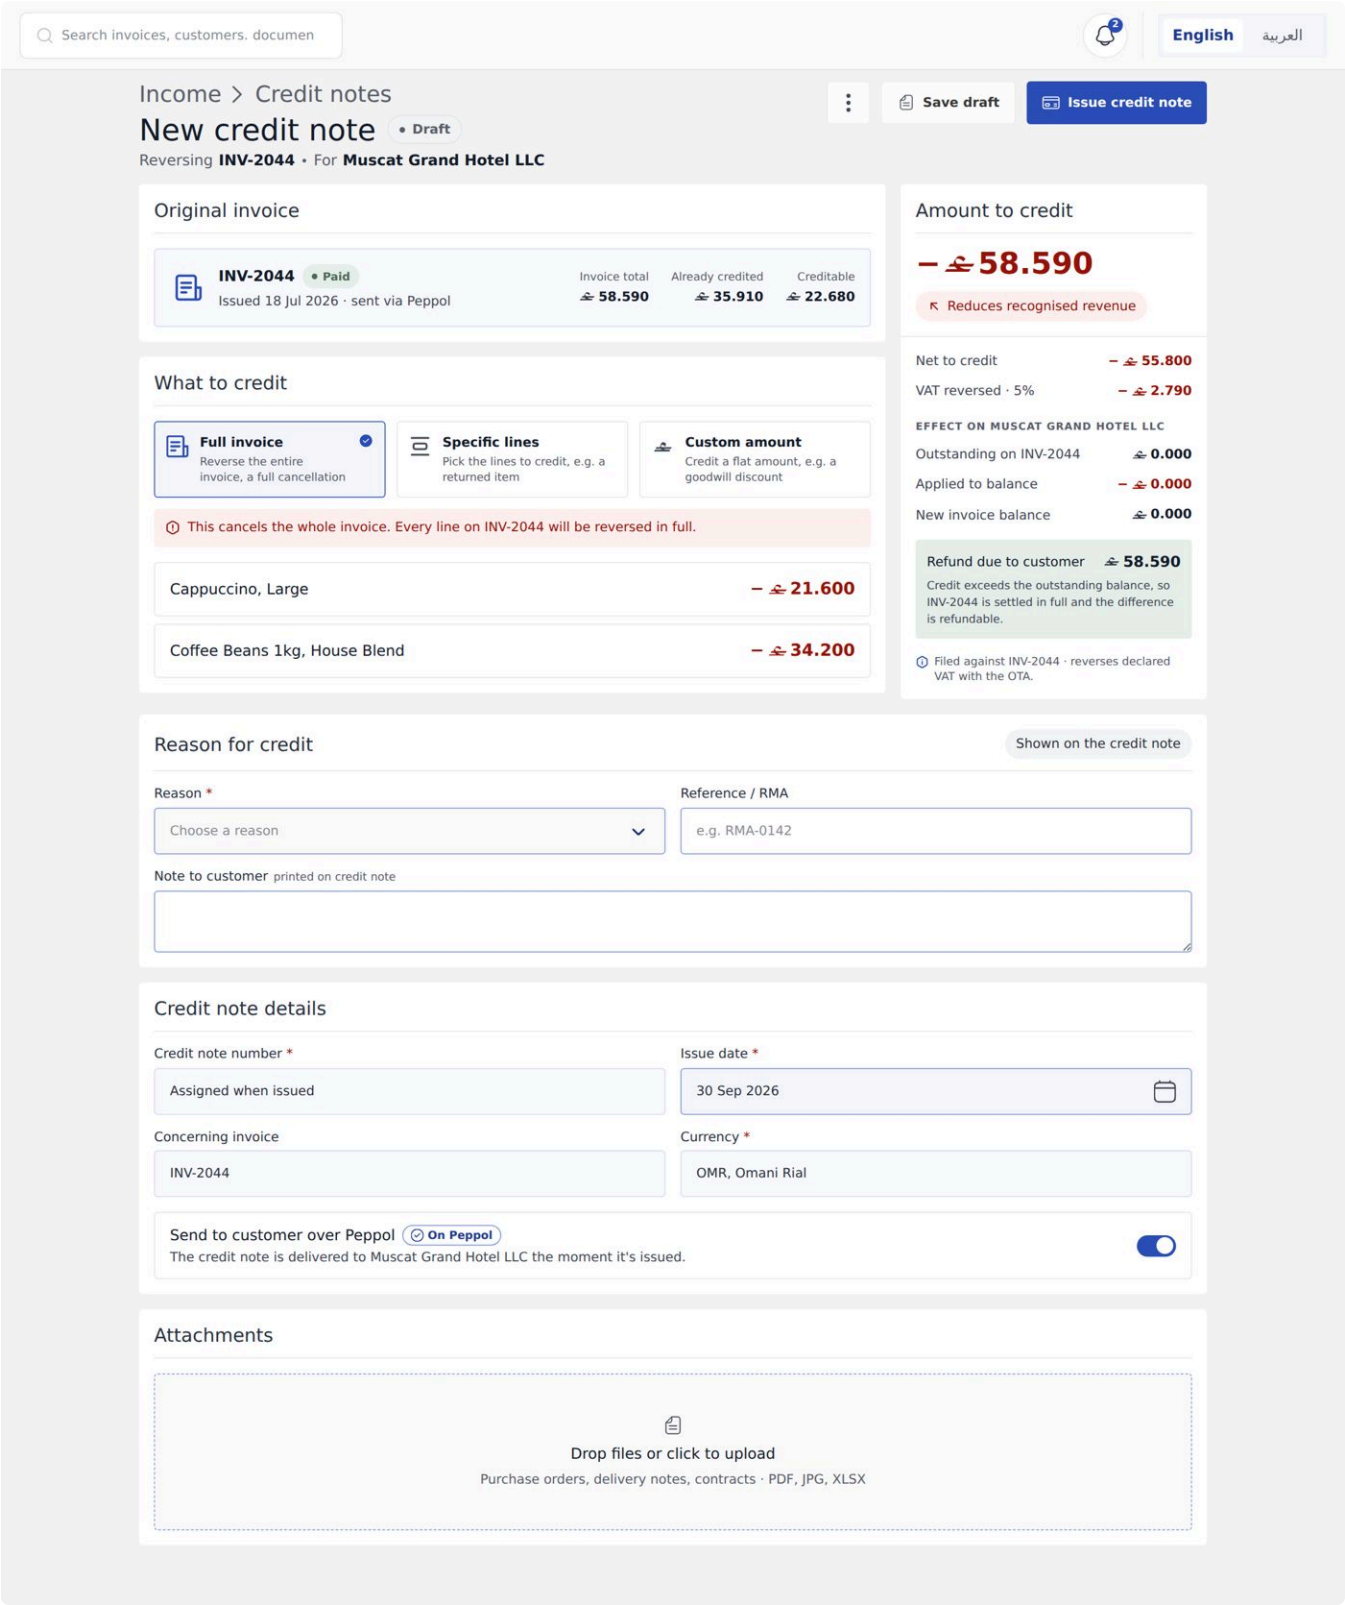

1. The screens (web, for reference)

Each kind has three screens: a list, a create screen opened from an invoice, and a detail page. The data and behaviour are what the mobile app must match; the layout is only a reference.

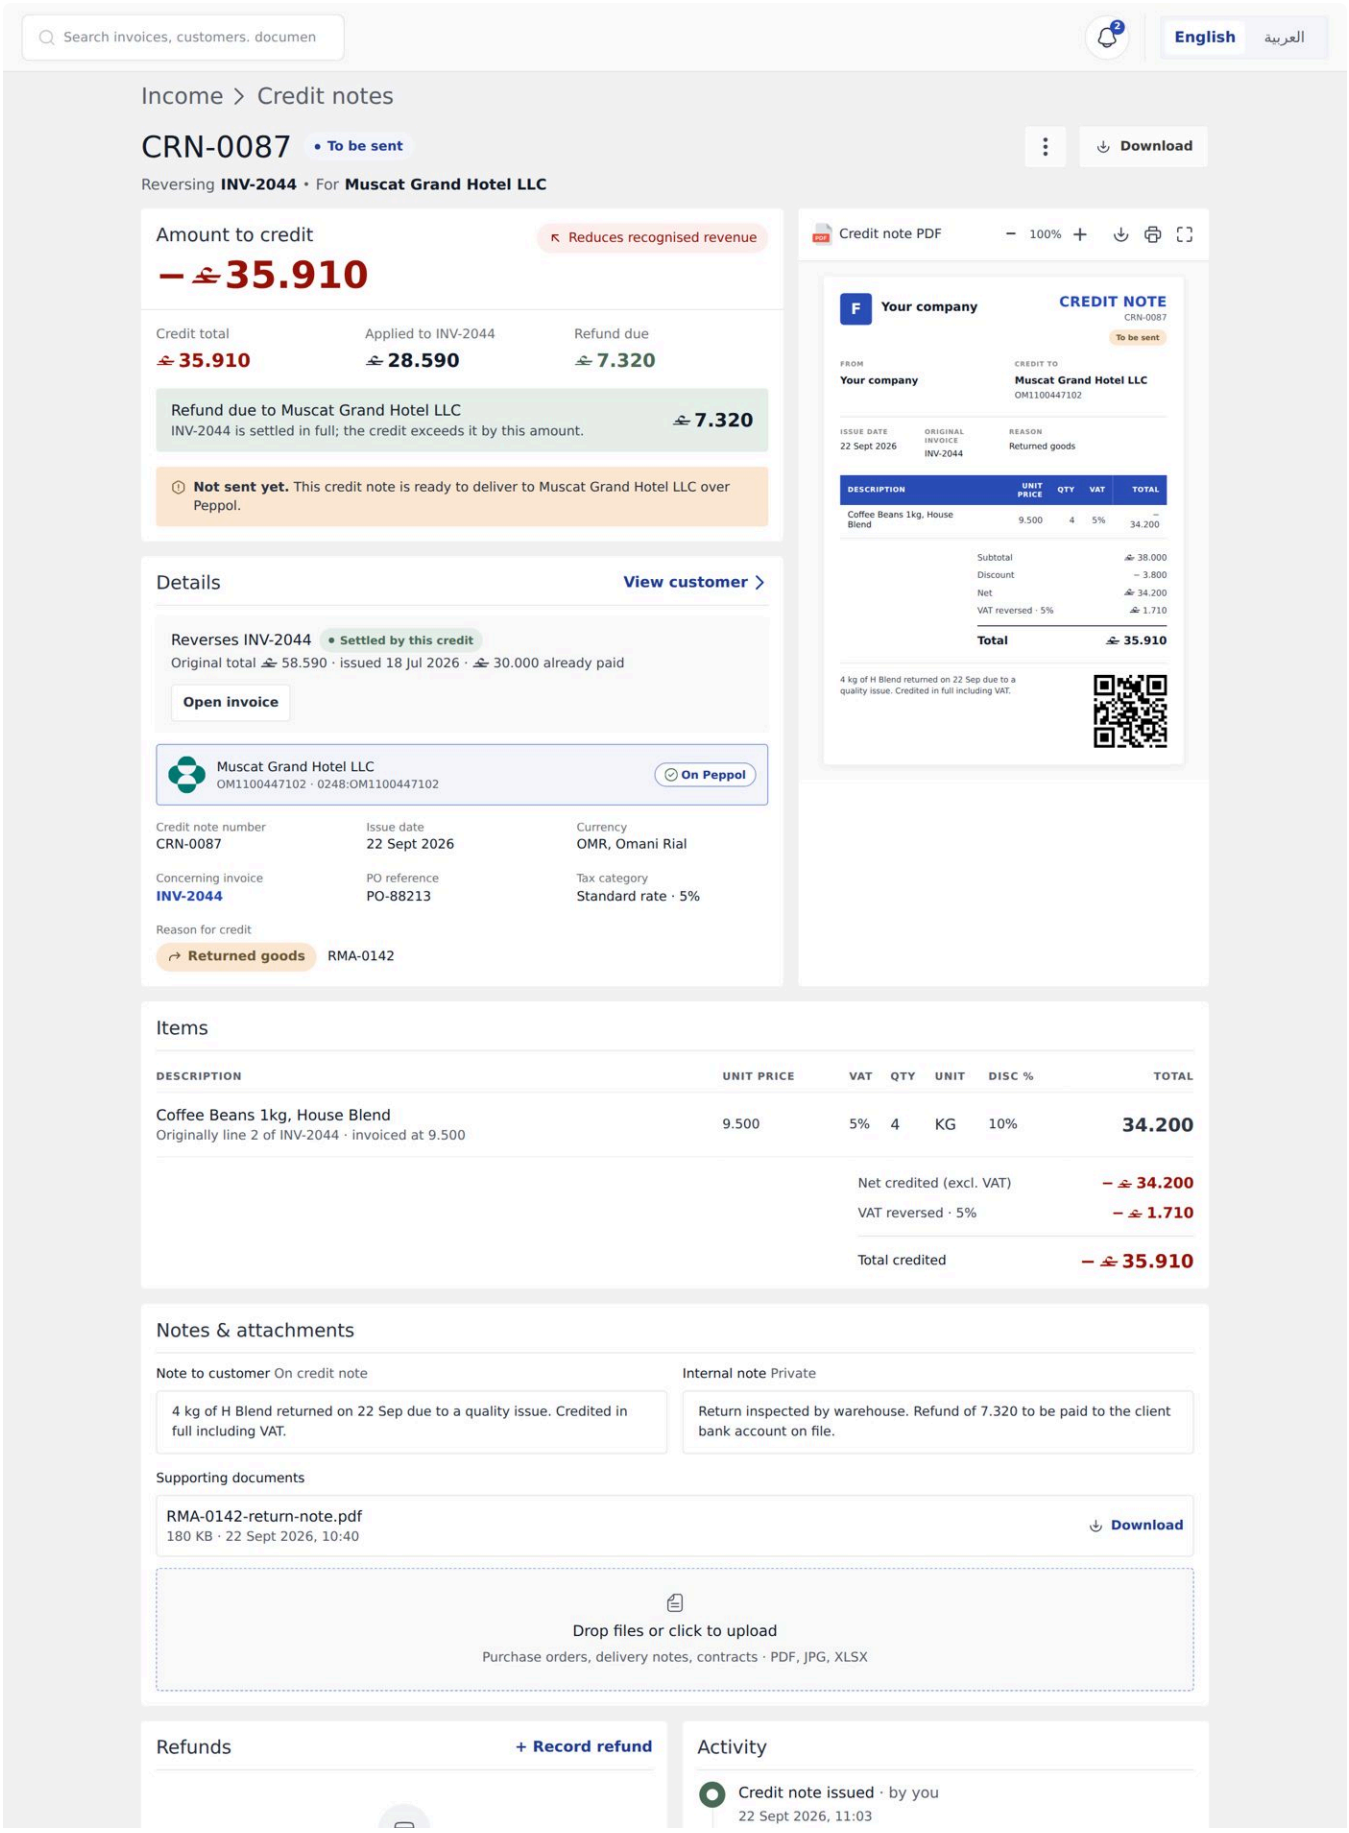

Credit notes list: four cards, tabs, one row per note.

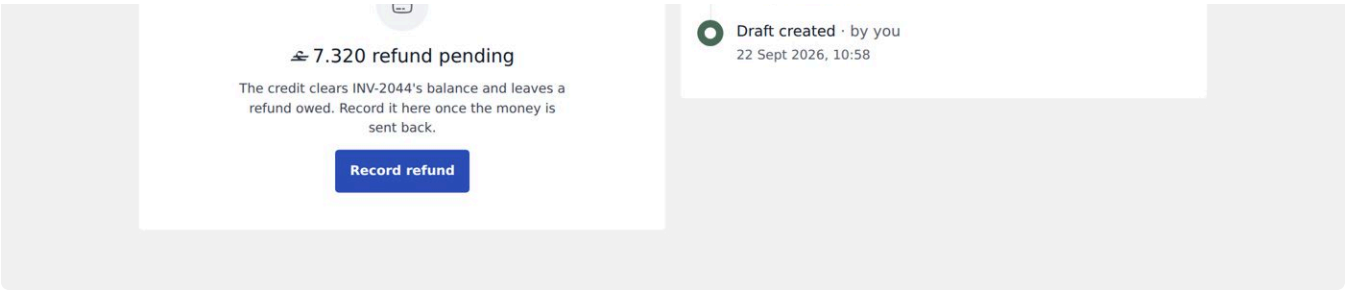

New credit note (opened from INV-2044): choose what to credit, the live "Amount to credit" panel, reason, details, attachments.

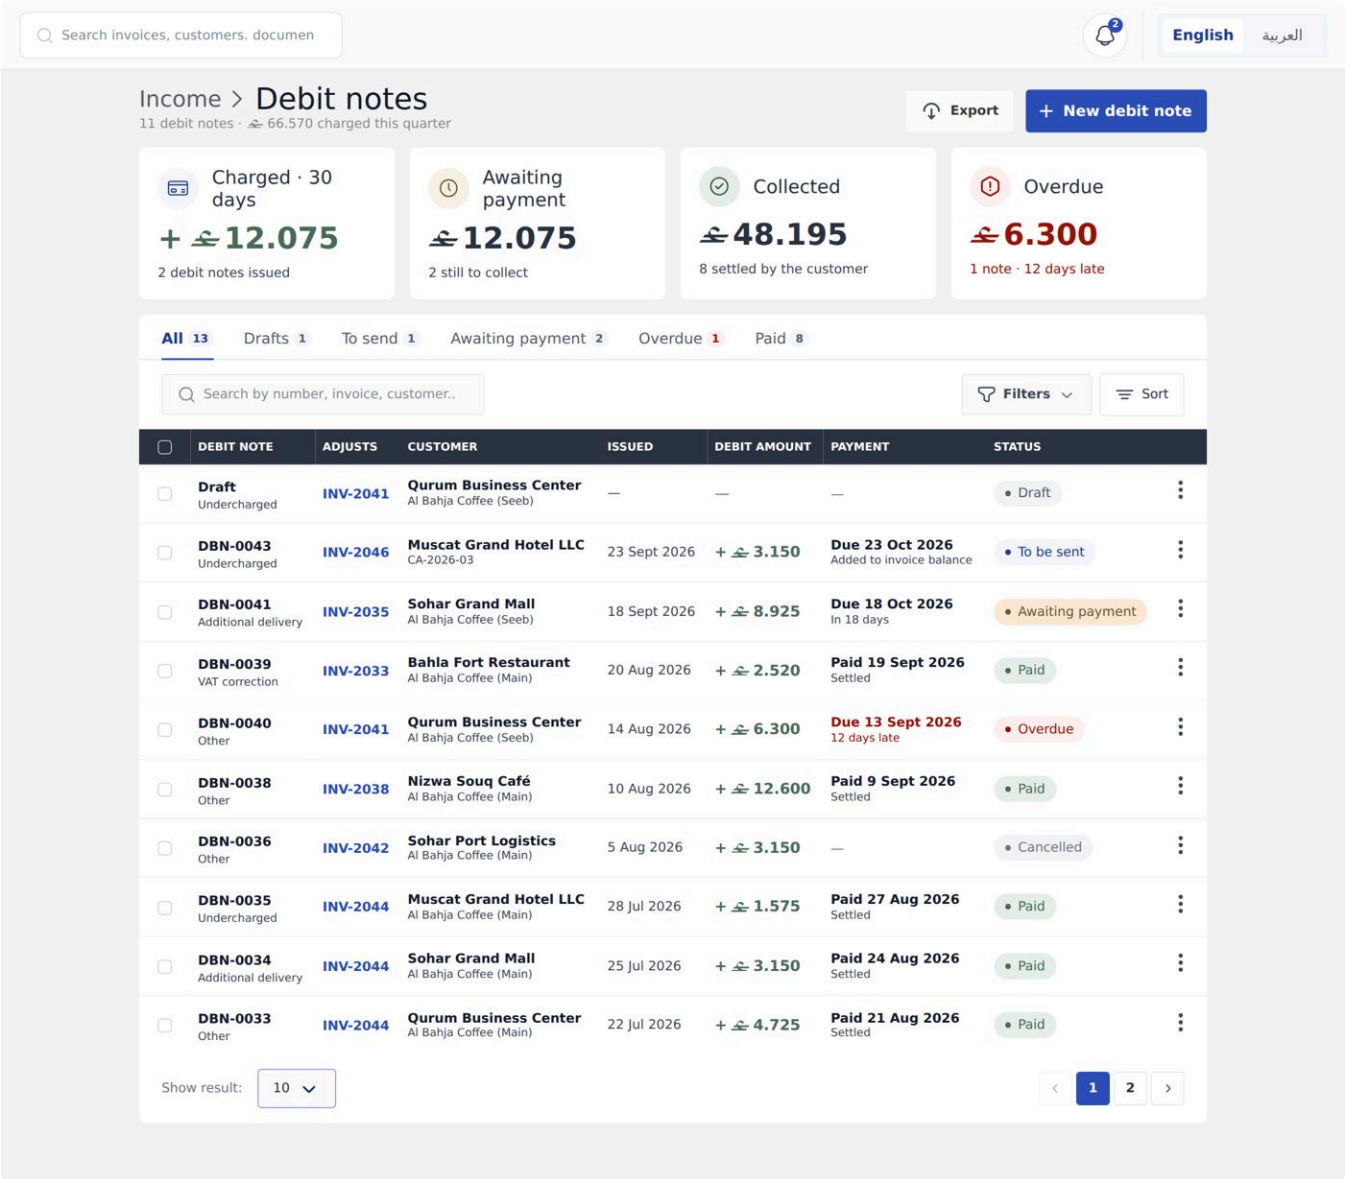

Credit note detail: credit total, applied to the invoice, refund due, the invoice it reverses, items, refunds.

The data in these screenshots is demo data from the test server.

2. Creating a note

A note is always started from an **issued invoice** (never a draft, never on its own). Offer it only when the invoice is `type = INVOICE`, `authoringState = ISSUED`, and the user has `creditnote.create` or `debitnote.create`. With no invoice chosen, show a searchable picker over `GET /v1/authored-invoices?state=ISSUED&type=INVOICE&q=&sort=ISSUED_NEWEST&size=20`.

What to credit or charge (one choice, a component with three options):

Credit mode	What it does	Debit mode	What it does
Full invoice (default)	every invoice line at its invoiced quantity and price, read only	Correct existing lines (default)	every invoice line listed with price 0.000; a line counts once its price and quantity are above 0; only the difference is charged
Specific lines	tick invoice lines; quantity and price editable	Additional items	the note's own lines (starts with one goods line)
Custom amount	the note's own free lines (starts with one service line)	Flat charge	exactly one own line, a service (freight, late payment fee)

Reason (required dropdown). The user picks a friendly reason; you send its PINT-OM code (BTOM-032, CL-02-OM) and the reason id:

Credit reason	Code	Debit reason	Code
Returned goods (`returnedGoods`)	QTY	Undercharged (`undercharged`)	VAL

Credit reason	Code	Debit reason	Code
Price correction (`priceCorrection`)	VAL	Additional delivery (`additionalDelivery`)	QTY
Order cancelled (`orderCancelled`)	CAN	Freight omitted (`freightOmitted`)	OTH
VAT correction (`vatCorrection`)	VAT	VAT correction (`vatCorrection`)	VAT
Goodwill discount (`goodwillDiscount`)	OTH	Late payment charge (`latePaymentCharge`)	OTH
Other (`other`)	OTH	Price escalation (`priceEscalation`)	VAL
		Other (`other`)	OTH

Send `details.correctionReasonCode` = the code and `details.correctionReasonDetail` = the reason id (the detail needs backend C2). Reading back: use the stored detail when it matches the code, else the first reason with that code.

Other fields

Field	Rule	Sent as
Reference / RMA	optional, max 200	`details.subject`
Note to customer	optional, max 1,000, printed on the note	`details.customerVisibleNote`
Note number	read only: "Assigned when issued"	none
Issue date	required; defaults to today (Muscat); not in the future; current year	on issue
Payment due (debit only)	required; issue date + the invoice's payment terms; not before the issue date	on issue (`dueDate`)
Concerning invoice, currency	read only, from the invoice	none

Field	Rule	Sent as
Default tax category (debit only)	read only text: the lines' one non-standard category, else "Standard rate · 5%"	none
Send over Peppol switch	shown, default on; **not sent** yet	none
Attachments	.pdf .jpg .jpeg .png .xlsx; uploaded after the draft is saved	see section 6

Copied from the invoice, never asked: `customerId`, `branchId`, `currency`, `vatMode: "EXCLUSIVE"`, `details.purchaseOrderReference`, `details.paymentTerms`, `details.transactionType` (`SIMPLIFIED` if the invoice was, else `FULL_TAX`), `details.deliveryDate: null`.

Save and issue: Save draft (needs `invoice.draft`) creates the draft the first time and updates it after, then uploads queued files. Issue (needs `invoice.issue`) saves, uploads, then issues. Discard (once saved) sets the draft to discarded. Issuing does not send the note to the customer.

3. Lines, VAT and totals

Line fields

Field	Invoice line (from the invoice)	Added line (the note's own)
Description	copied; shows "On INV-x: qty × price" under it	free text, required, max 1,000
Goods / Service	copied from the invoice line	toggle; switching clears the classification and narrows the units
Unit	copied	goods or service unit list, ending in ZZ Other
Price excl. VAT	credit: editable in Specific lines, never above the invoiced price; debit: the extra price only	three decimals, not negative

Field	Invoice line (from the invoice)	Added line (the note's own)
Quantity	credit: editable in Specific lines, never above the invoiced quantity	above 0
Discount	copied (percentage or fixed OMR)	percentage 0 by default
VAT category	the invoice's, shown as text	S5, Z0, E0, O0; defaults to the invoice's first line
No-VAT reason	the invoice's	Z: VATZR-OM code (required); E: VATEX-OM code (required); O: free text, optional; S: none
Classification	copied	goods: 12-digit HS code; service: service type; hidden when the customer is a consumer

- Invoice lines keep `productId` and `productCode`; added lines send neither key.
- The same HS code search, service type list and VAT reason lists as invoice creation (see the onboarding-to-invoice guide).

Rules to apply before save

1. A reason is chosen.
2. At least one line is included. Debit "Correct existing lines" needs at least one line with a price difference.
3. Credit: quantity and price never above the invoice's. The server also refuses a credit above what is still creditable (`CREDIT_NOTE_EXCEEDS_CORRECTABLE_AMOUNT`, `CREDIT_NOTE_NOTHING_CORRECTABLE`).
4. Every included line has a description.
5. Z and E lines have their reason code.
6. **One reason per VAT rate:** lines with the same category and rate must carry the same reason (BR-CO-18). Otherwise refuse with "same VAT rate, different reasons". The server's `TAX_CATEGORY_REASON_CONFLICT` means the same.
7. Dates: issue date not in the future and in the current year; debit due date on or after the issue date.

Document discount (sent as `headerDiscount`)

Note	Sent
Credit, Full invoice	the invoice's own document discount, unchanged
Credit, Specific lines	a percentage: the same percentage. A fixed amount: the invoice's discount × (chosen lines ÷ all lines, after line discounts), rounded half up to 3 decimals
Credit, Custom amount; every debit note	`{type: FIXED_AMOUNT, value: 0}`

Totals are worked out on the device with the same method as invoices (line discount, then document discount, then VAT per rate, three decimals half up). The side panel shows:

- Total, with "Reduces recognised revenue" (credit) or "Increases recognised revenue" (debit).
- Net and "VAT reversed / VAT added · 5%".
- **Effect on the customer:** outstanding on the invoice (`receivable.outstandingAmount`); credit: applied to balance, new balance = max(outstanding − credit, 0), and **refund due** = max(credit − outstanding, 0); debit: added by this note, new balance = outstanding + total.

Credit amounts show as "−" in red, debit amounts as "+" in green.

4. List screen

The list reads rows from `GET /v1/authored-invoices?type=CREDIT_NOTE` (or `DEBIT_NOTE`) and its counts and cards from `GET /v1/authored-invoices/summary?type=…`. Subtitle: "{n} credit notes · {amount} credited this quarter" (debit: "charged this quarter"), from `issuedThisQuarter`.

Tabs

Credit tab	Request	Count from	Debit tab	Request	Count from
All	`state=DRAFT,ISSUED,CANCELLED`	`all`	All	same	`all`
Drafts	`state=DRAFT`	`drafts`	Drafts	same	`drafts`
To send	`state=ISSUED`, keep rows not yet sent	`toSend`	To send	same	`toSend`

Credit tab	Request	Count from	Debit tab	Request	Count from
Refund due	no request yet: empty state	none	Awaiting payment	`payment=AWAITING`	`awaiting`
Applied	`state=ISSUED`	`issuedTotal.count`	Overdue	`payment=OVERDUE`	`overdue` (red)
Refunded	no request yet: empty state	none	Paid	`payment=PAID`	`paid`

The four cards

Credit card	From	Debit card	From
Credited · 30 days	`issuedLast30Days` ("{n} credit notes issued")	Charged · 30 days	`issuedLast30Days`
Refund due	not available yet	Awaiting payment	`awaitingTotal`, `awaiting`
Applied to invoices	`issuedTotal` ("{n} offset, no cash out")	Collected	`paidTotal`, `paidInvoices`
Refunded	not available yet	Overdue	`overdueTotal`, `overdueInvoices`; days late = `asOf` − `oldestOverdueDueDate`

A figure the server does not give reads "Not available yet" (words, no rial sign).

Row

- Note number (or "Draft") with the reason label under it.
- The invoice it reverses or adjusts (`correctionOfInvoiceNumber`), which opens that invoice.
- Customer name, with the reference or branch under it.
- Issue date; amount (`totals.totalAmount`, "−" red or "+" green; "—" for drafts).
- Credit: Refund cell ("Applied · offset invoice" for now). Debit: Payment cell (below).
- Status pill.

Status

1. Draft → "Draft". Not issued and not a draft → "Cancelled".
2. Issued but `deliveryState` is not `SENT_MANUALLY` → "To be sent".
3. Credit → "Applied".

4. Debit → "Overdue" if `payment.overdue`, "Paid" if `payment.state = PAID`, else "Awaiting payment".

Debit Payment cell (read from `payment`, not from the status): paid → "Paid {lastPaymentDate}"; overdue → "Due {date} · {n} days late" in red; otherwise "Due {date}" with "Added to invoice balance" (not yet sent) or "In {n} days".

Search, sort, pages: search `q` (debounced), sort `UPDATED` (default), `ISSUED_NEWEST`, `ISSUED_OLDEST`, `AMOUNT_HIGHEST`, `AMOUNT_LOWEST`, `CUSTOMER`; pages are 0-based, size 10 / 25 / 50 (the server refuses above 100). A draft row opens the editor if the user has `invoice.draft`, otherwise the detail.

5. Detail screen

The detail reads the note, its receivable, attachments and history, the customer, and the original invoice with its receivable (plus payments for a debit note).

Figures

Credit note	How it is worked out
Credit total	`totals.totalAmount`
Applied to {invoice}	total − refund
Refund due	only when this is the invoice's **sole** credit note (the invoice's `creditedAmount` equals this note's total): overpaid = max(0, invoice paid + invoice credited − invoice total); refund = min(total, overpaid). With several credit notes on the invoice, both Applied and Refund due read "Not available yet"

Debit note	How it is worked out
Debit total	`totals.totalAmount`
Added to {invoice}	the total
Now due on the invoice	invoice outstanding + this note's outstanding

Status, chips and banners

- Status pill: Draft, Cancelled, To be sent, then credit: Refund due (refund above 0) or Applied; debit: Overdue, Paid or Awaiting payment.
- Chip beside the original invoice: credit "Settled by this credit" (refund above 0) or "Balance reduced"; debit "Balance increased".
- Banners: credit with a refund: "Refund due to {customer}: {invoice} is settled in full; the credit exceeds it by this amount." Debit: "Awaiting payment from {customer}" (red when overdue) or "Paid by {customer}". Not yet sent: "Not sent yet. This note is ready to deliver to {customer} over Peppol."

Customer card: name, then "VAT {vatNumber} · {Peppol ID}", e.g. "0248:OM1100447102". Build the Peppol ID from `peppolParticipantId` without adding `0248:` twice. Show "On Peppol" when the customer's Peppol delivery is active.

Other parts: note fields (number, issue date, currency or payment due, invoice, PO, tax category, reason, reference); items with "Originally line {n} of {invoice}" or "Added on this note"; totals; note to customer and the private internal note; supporting documents (download); activity from `/history`; a printable preview.

Actions

Action	When	Permission
Edit draft, Issue	draft	`invoice.draft`, `invoice.issue`
Download	issued	none
Record payment, reverse a payment (debit)	unpaid or part paid	`invoice.payment.manage`
Send reminder (debit)	awaiting or overdue	none
Record refund (credit)	refund above 0	shown, but only says "not available yet": no refund endpoint
Cancel note	issued and not yet delivered; a reason is required	`invoice.cancel`
Open invoice	always	none

There is no Send / Peppol action yet: issuing does not deliver.

6. APIs to wire

Step	Call	Notes
Pick an invoice	`GET /v1/authored-invoices?state=ISSUED&type=INVOICE&q=&size=20`	only when no invoice was chosen
Load the invoice and its balance	`GET /v1/authored-invoices/{invoiceId}`, `GET …/{invoiceId}/receivable`	receivable: `documentTotal`, `paidAmount`, `creditedAmount`, `outstandingAmount`, `paymentState`, `overdue`, `dueDate`
Customer	`GET /v1/customers/{customerId}`	needs `customer.read`; tells consumer vs business (classification)
Create the note draft	`POST /v1/authored-invoices/{invoiceId}/credit-notes` or `/debit-notes`	header `Idempotency-Key`; body = the draft (below), not wrapped
Update the draft	`PUT /v1/invoice-drafts/{id}`	`{expectedVersion, draft}`; needs `invoice.draft`
Reopen a draft	`GET /v1/invoice-drafts/{id}`	the invoice is `correctionOfInvoiceId`
Discard	`DELETE /v1/invoice-drafts/{id}?expected_version=`	sets it to discarded
Upload a file	`POST /v1/authored-invoices/{draftId}/attachments`	multipart field `file`; after save, before issue; needs `invoice.attachment.manage`
Issue	`POST /v1/invoice-drafts/{id}/issue`	header `Idempotency-Key`; `{expectedVersion, issueDate, dueDate}`; a credit note sends `dueDate = issueDate`
List	`GET /v1/authored-invoices?type=CREDIT_NOTE|DEBIT_NOTE&state=&payment=&q=&sort=&page=&size=`	see section 4
Counts and cards	`GET /v1/authored-invoices/summary?type=…`	`all`, `drafts`, `toSend`, `awaiting`, `overdue`, `paid`, `awaitingTotal`, `overdueTotal`, `paidTotal`, `issuedTotal`, `issuedLast30Days`, `issuedThisQuarter`

Step	Call	Notes
Detail	`GET /v1/authored-invoices/{id}` plus `/receivable`, `/attachments`, `/history`, `/internal-note` (needs `invoice.internal-note.read`)	
Debit payments	`GET /payments`, `POST /payments` (`{amount, methodCode, paymentReference, paymentDate}`, header `Idempotency-Key`), `POST /payments/{pid}/reverse`	needs `invoice.payment.manage`
Cancel	`POST /v1/authored-invoices/{id}/cancel`	`{expectedVersion, reason}`; refused once delivered; needs `invoice.cancel`

Draft body (unknown fields are refused):

```
{
  "customerId": "…", "branchId": "…", "currency": "OMR", "vatMode":
"EXCLUSIVE",
  "headerDiscount": { "type": "FIXED_AMOUNT", "value": 0 },
  "details": {
    "deliveryDate": null, "subject": "RMA-0142", "purchaseOrderReference":
"PO-88213",
    "customerVisibleNote": "4 kg returned, quality issue",
    "paymentTerms": { "code": "NET30", "label": "Net 30 days" },
    "transactionType": "FULL_TAX",
    "correctionReasonCode": "QTY", "correctionReasonDetail": "returnedGoods"
  },
  "lines": [{
    "lineNumber": 1, "productId": "p-beans-h", "productCode": "BEANS-H",
    "description": "Coffee Beans 1kg, House Blend", "unitCode": "KGM",
    "quantity": 4, "unitPrice": 9.5, "discount": { "type": "PERCENTAGE",
"value": 10 },
    "taxCategory": { "code": "S5", "en16931Category": "S", "rate": 5,
"exemptionReason": null, "exemptionReasonCode": null },
    "classification": { "goodsOrService": "G", "hsCode": "090121000000" }
  }]
}
```

The product and HS code above are examples only.

Idempotency keys: one key for create and one for issue (`draft-<uuid>`). Make a new key only after the server refused the last request (a 4xx). After a timeout, a network error or a 5xx, retry with the **same** key, so the note is never created or issued twice.

Errors to handle

Code	Meaning
`CORRECTED_INVOICE_NOT_ISSUED`, `CREDIT_NOTE_REFERENCE_REQUIRED`, `DEBIT_NOTE_REFERENCE_REQUIRED`	the invoice is not issued
`CORRECTION_REASON_CODE_INVALID`, `…_REQUIRED`, `CORRECTION_REASON_DETAIL_…`	the reason is wrong or missing
`CREDIT_NOTE_EXCEEDS_CORRECTABLE_AMOUNT`, `CREDIT_NOTE_NOTHING_CORRECTABLE`	the credit is more than is left to credit
`TAX_CATEGORY_REASON_CONFLICT`, `TAX_CATEGORY_METADATA_CONFLICT`	two lines at one VAT rate with different reasons
`ISSUE_DATE_IN_FUTURE`, `ISSUE_DATE_OUTSIDE_CURRENT_YEAR`, `DUE_DATE_BEFORE_ISSUE_DATE`, `PERIOD_CLOSED`, `QUOTA_EXCEEDED`	issue refused
`STALE_INVOICE_VERSION`	someone else changed it; reload

7. Waiting on the backend, and a checklist

The web version of this behaviour is in review (PRs #110 and #111) and goes live once the backend serves the items below. Build against them now; until they are live, expect the fallbacks shown.

Item	Needed for	Until then
D1: `summary?type=` with `issuedTotal`, `issuedLast30Days`, `issuedThisQuarter`	list counts, cards, subtitle	the server ignores the type: counts cover every document and cards read "Not available yet"

Item	Needed for	Until then
C2: `details.correctionReasonDetail`	showing the exact reason picked	a reopened note shows the first reason with that code
4.2 and 4.19: refunds per credit note, and a record-refund endpoint	Refund due and Refunded tabs and cards, Record refund, the list's Refund column	Refund tabs empty; refund figures only for an invoice's sole credit note
Peppol send and delivery status	sending a note	the Send over Peppol switch is not sent; notes stay "To be sent"
Upload on an issued note	attachments after issue	files can be added only while it is a draft

Known open question: "Full invoice" on an invoice that already has a credit note credits the whole invoice, not only what is left. The server refuses it at issue if it is too much. Should the mobile app cap it to the "Creditable" figure up front? The owner has not decided yet.

Checklist

- [ ] Notes start only from an issued invoice, with `creditnote.create` / `debitnote.create`
- [ ] Credit modes: Full invoice, Specific lines, Custom amount. Debit modes: Correct existing lines, Additional items, Flat charge
- [ ] Reason dropdown sends the code and the reason id
- [ ] Credit quantity and price never above the invoice's
- [ ] Added lines: Goods/Service, units with Other, VAT category, Z/E reason codes, O optional text, HS code or service type (not for consumers)
- [ ] One reason per VAT rate
- [ ] Document discount copied or shared out as in section 3
- [ ] Side panel: total, VAT, effect on the customer, refund due
- [ ] Save draft, upload files, then issue; idempotency keys reused on retry
- [ ] List tabs, cards and statuses read from the summary and rows as in section 4
- [ ] Detail figures, the sole-credit-note refund rule, Peppol ID without a double `0248:`
- [ ] Debit: record and reverse payments

- [ ] English and Arabic for every label; three decimals with the rial sign
