Fawtir mobile: Bills and Suppliers, screens and APIs

Oct 3, 2026 · @Rixon Agency

The mobile app covers two parts of Expenditure only: **Bills** (bills from suppliers: see, approve, hold, pay, and get new ones in) and **Suppliers** (the people you buy from). Payment runs, recurring bills, purchase orders, supplier credit and debit notes and reminder settings stay web only. Each section shows the web screen as a reference, then the calls behind it. The layout on mobile is your call; the data and rules must match.

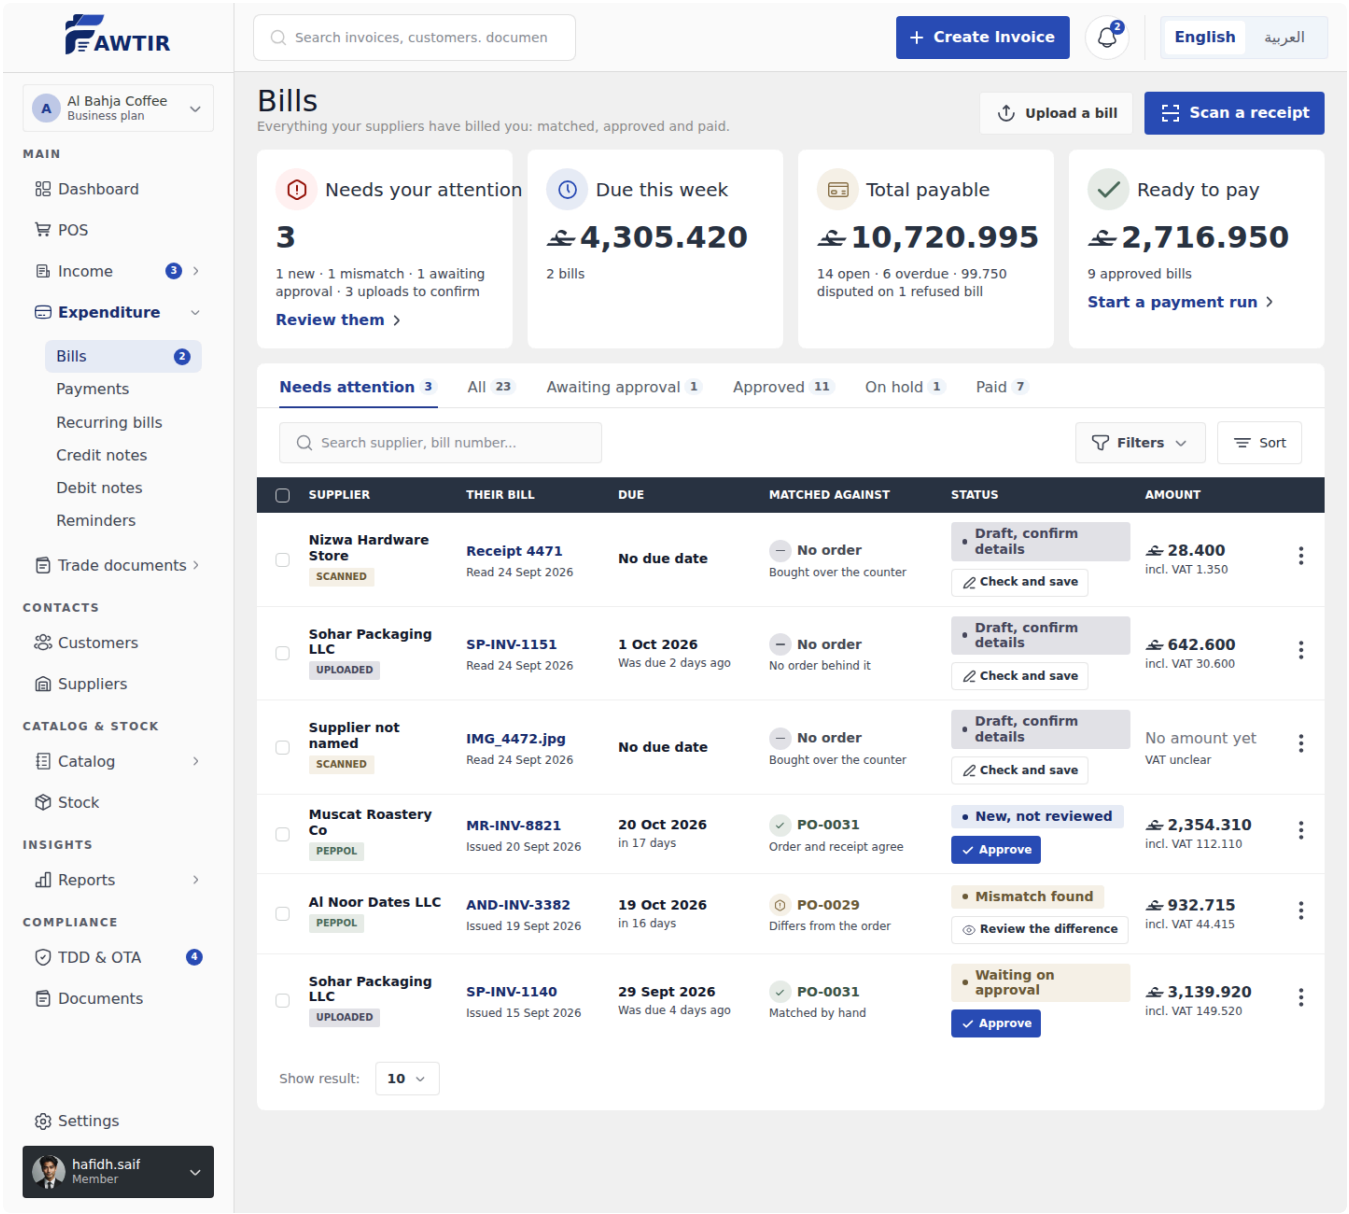

Shared rules are the same as in "Fawtir mobile: API reference, sign-up to issued invoice" (base URL, sign-in, headers, idempotency, versions, money). Two differences in this area:

- **Refusal code field.** Expenditure answers put the code in `error` (not `code`), and the trace id in `trace_id`.
- **Pages.** Bills and suppliers lists answer `{items, page, pageSize, count, total?, truncated?}`. `count` is the rows on this page, not a total.

Hide, don't disable. An action the user may not take is not shown at all. The permissions this area uses are in each section; read them once from `GET /v1/me/entitlements`.

1. Bills list

Everything suppliers have billed the company: four cards on top, six tabs, one row per bill.

#	Call	Notes
1.1	`GET /v1/bills?filter=&q=&source=&sort=&supplier_id=&page=&page_size=`	`filter`: `NEEDS_ATTENTION` (default tab), `AWAITING_APPROVAL`, `APPROVED`, `ON_HOLD`, `PAID`; leave it out for All. `source`: `PEPPOL`, `UPLOADED`, `SCANNED`, `RECURRING`, `SELF_BILLED`. `sort`: `DUE_SOONEST`, `DUE_LATEST`, `AMOUNT_HIGHEST`, `AMOUNT_LOWEST`, `SUPPLIER`; leave out for newest. Pages 0-based; the web uses 10
1.2	`GET /v1/bills/summary` (add `?q=&source=` for tab counts that follow the search)	Cards: `dueThisWeekCount`, `dueThisWeekTotal`; `openTotal`, `overdueCount`, `disputedCount`, `disputedTotal`; `readyToPayCount`, `readyToPayTotal`. Needs-attention card: `needsAttention {draft, new, mismatch, awaitingApproval, total}`. Tab counts: `tabs {needsAttention, all, awaitingApproval, approved, onHold, paid}`
1.3	`GET /v1/bills/intake?status=UNCONFIRMED&source=&page=0&page_size=20`	Unconfirmed uploads and scans ("Draft, confirm details" rows). Show them only on Needs attention or All, page 1, no search

Row fields: `id`, `supplierName`, `supplierBillNumber`, `source`, `issueDate`, `dueDate`, `overdue`, `totalIncludingVat`, `vatAmount`, `outstandingAmount`, `currencyCode`, `workflowState`, `readiness {state, distinctApprovals, required, autoApproved}`,

`match {verdict, purchaseOrderNumber}`, `hold {reason}`, `paymentRunReference`, `paidOnTheSpot`, `documentTypeCode` (380 bill, 381 credit note, 383 debit note, 389 self-billed).

Status: `workflowState` is one of `NEW`, `MISMATCH`, `AWAITING_APPROVAL`, `APPROVED`, `ON_HOLD`, `REJECTED`, `IN_PAYMENT_RUN`, `PAID`. An `APPROVED` bill whose `match.verdict` is `MISMATCH` still shows **Mismatch**. Credit notes (381) owe nothing.

Row button: Approve when the bill waits for approval and the user has `invoice.approve`; otherwise Nudge (`invoice.payment.manage`, waiting for approval); Review the difference on a mismatch; Check and save on an unconfirmed upload (`invoice.payment.manage`).

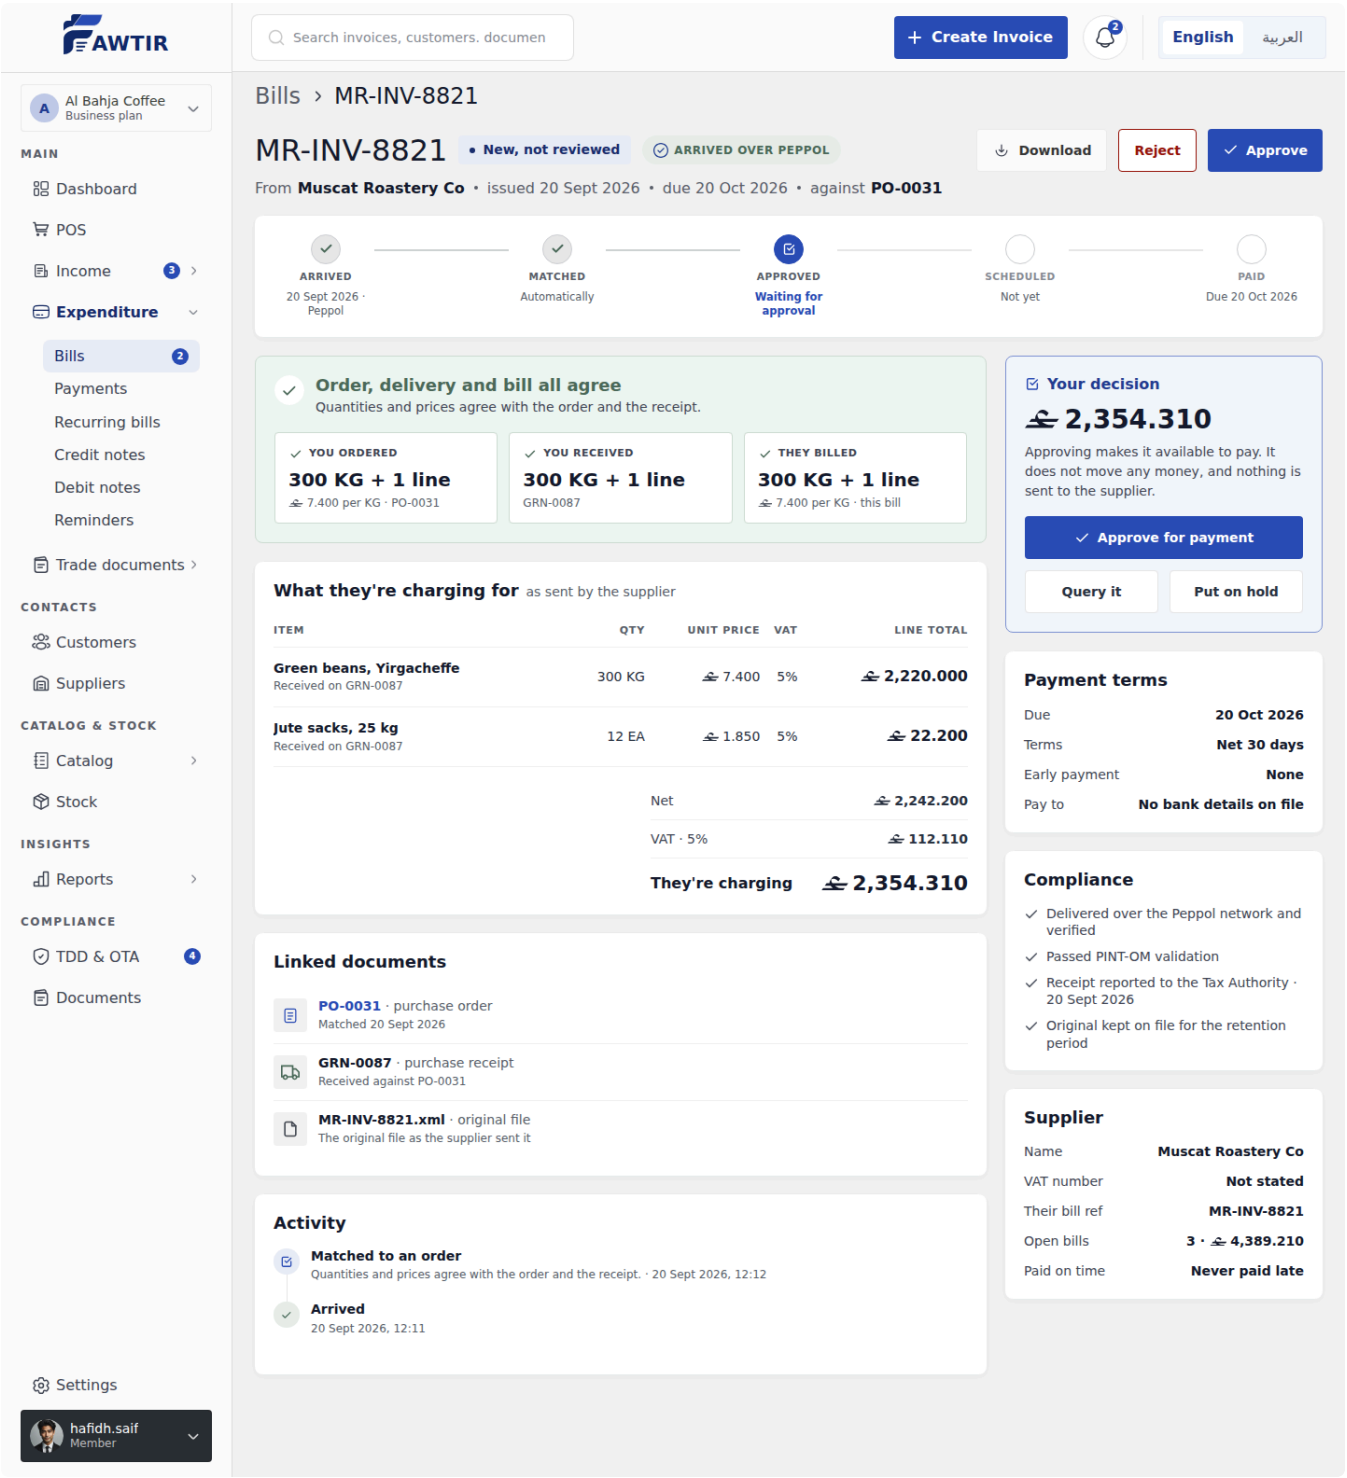

Top buttons: Upload a bill and Scan a receipt (section 3), both `invoice.payment.manage`. **Export** (below), `invoice.export`. Leave "Start a payment run" out of mobile.

Export (CSV): `GET /v1/bills/export.csv?filter=&q=&source=&sort=` (needs `invoice.export`; hide the button without it)

- Send the same tab, search, source and sort the list is showing. Leave out `filter` for All and `sort` for Newest. No page: the file holds every matching bill up to the server's cap.
- The answer is a CSV file. Take the name from `Content-Disposition`, or use `fawtir-bills.csv`. Save it and open the phone's share sheet.
- If the response header `X-Fawtir-Export-Truncated: true` is set, show: "The file stops at 10,000 bills. Narrow the filters to export the rest."
- While it downloads, the button reads "Exporting…". A refusal shows our wording for its `error` code as elsewhere.

2. Bill detail and actions

One bill: where it is (arrived, matched, approved, scheduled, paid), what is charged, the decision, payment terms and history.

Read: `GET /v1/bills/{id}` returns:

- `bill`: the row fields, plus `amountDue`, `creditedAmount`, `inboundDeliveryId`, `complianceObligation`.
- `lines[] {lineNo, description, quantity, unit, unitPrice, vatRate, lineNet, taxCategoryCode}`. Show the VAT category as S, Z, E or O.

- `readiness`, `approvals[] {decision, reason, decidedBy, decidedAt}`, `hold`, `holdHistory[]`.
- `settlement {billTotal, paidAmount, creditedAmount, outstandingAmount, currency, paymentState, overdue, dueDate}`, `payments[]`, `paymentRunReference`.
- `intake {id, filename}` (the original file), `selfBilling {invoiceNumber, agreementReference}` on a self-billed bill, `activity[] {at, kind, detail, actor}`.

With `supplier.read`, the page also reads `GET /v1/suppliers/{supplierId}` for the supplier card.

#	Action	Call	Shown only when
2.1	Approve	`POST /v1/bills/{id}/approval/approve`, body `{}`	`invoice.approve`; not paid, not a credit note; not yet approved
2.2	Reject ("Query it")	`POST /v1/bills/{id}/approval/reject`, body `{reason}` (max 1,000)	`invoice.approve`; not rejected; nothing paid; not in a payment run
2.3	Put on hold	`POST /v1/bills/{id}/hold`, body `{reason}` (max 500)	`invoice.payment.manage`; not paid; not already on hold
2.4	Release	`POST /v1/bills/{id}/release`, no body	`invoice.payment.manage`; on hold
2.5	Nudge the approver	`POST /v1/bills/{id}/approval/nudge`, no body. Answer `{billId, nudgedOn, approvers}`	Waiting for approval and the user can't approve it; once per bill per day
2.6	Record payment	`POST /v1/bills/{id}/payments`, header `Idempotency-Key: payment-<uuid>`, body `{amount, currency, methodCode, paymentReference, paymentDate}`	All of: `invoice.payment.manage`; approved; not on hold; no unresolved mismatch; not in a payment run; still owes money
2.7	Download the original	`GET /v1/bills/intake/{intakeId}/file`, or `GET /v1/inbound-invoices/{inboundDeliveryId}/document` for a Peppol bill	A file exists

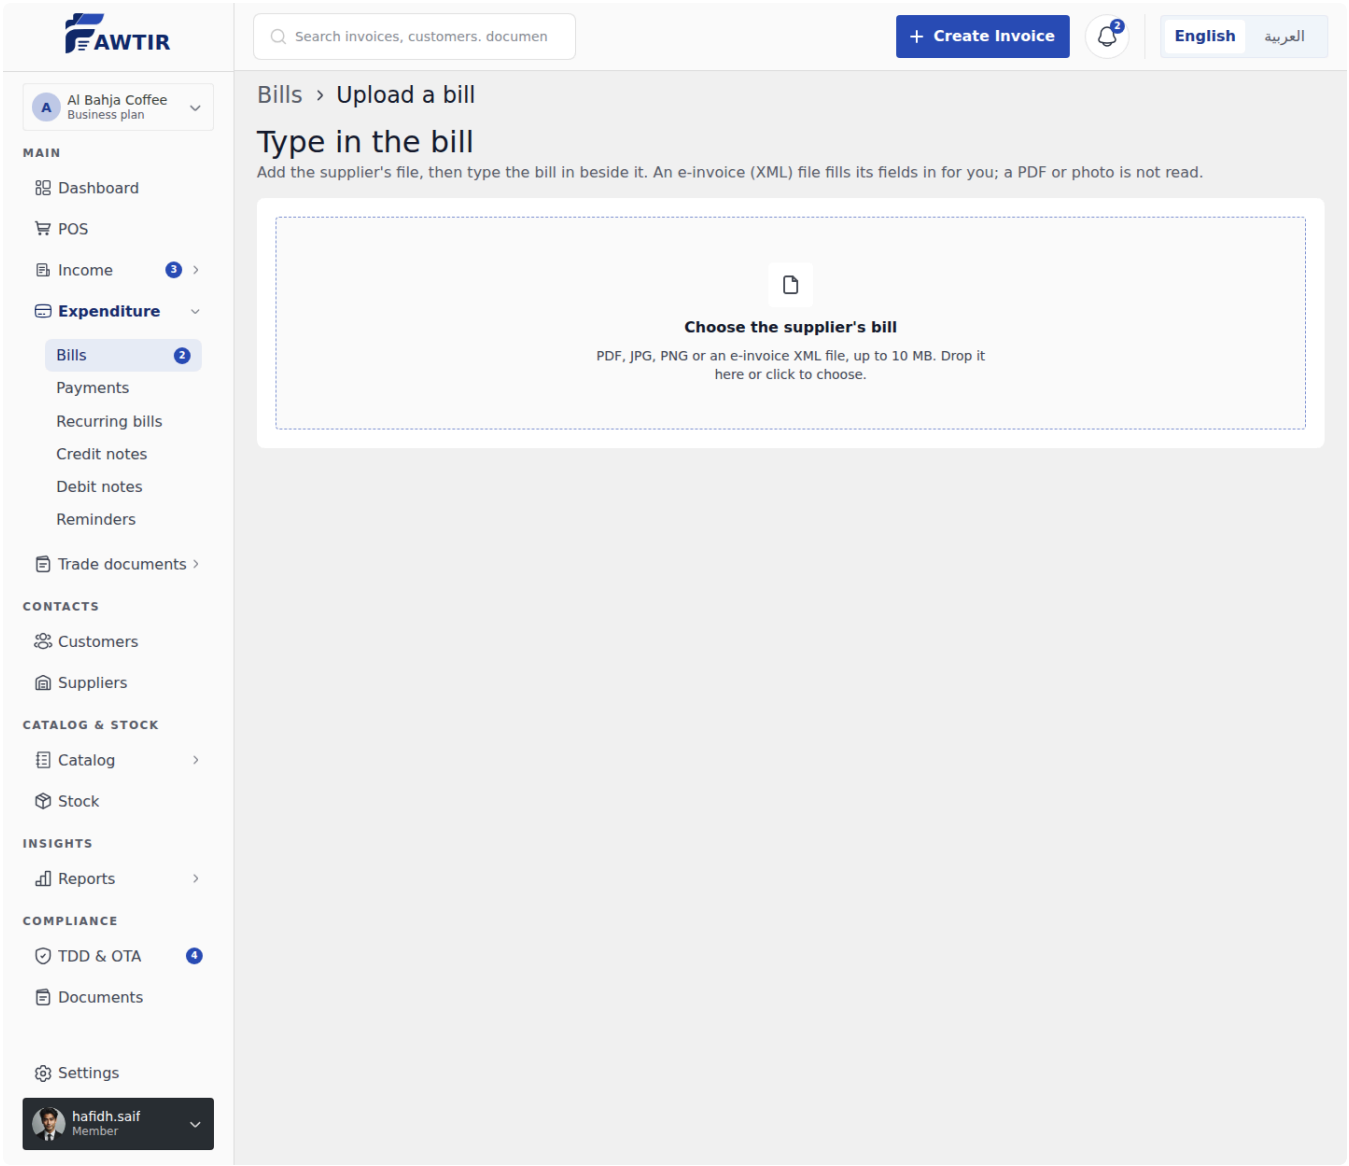

Payment body: `currency` is the bill's own; `methodCode` from reference data (default `30` bank transfer; 10 cash, 20 cheque, 48 card, 68 online); `paymentReference` up to 200 or `null`; `paymentDate` `YYYY-MM-DD`, today in Muscat by default, not in the future. One key per open payment form; reuse it on retry.

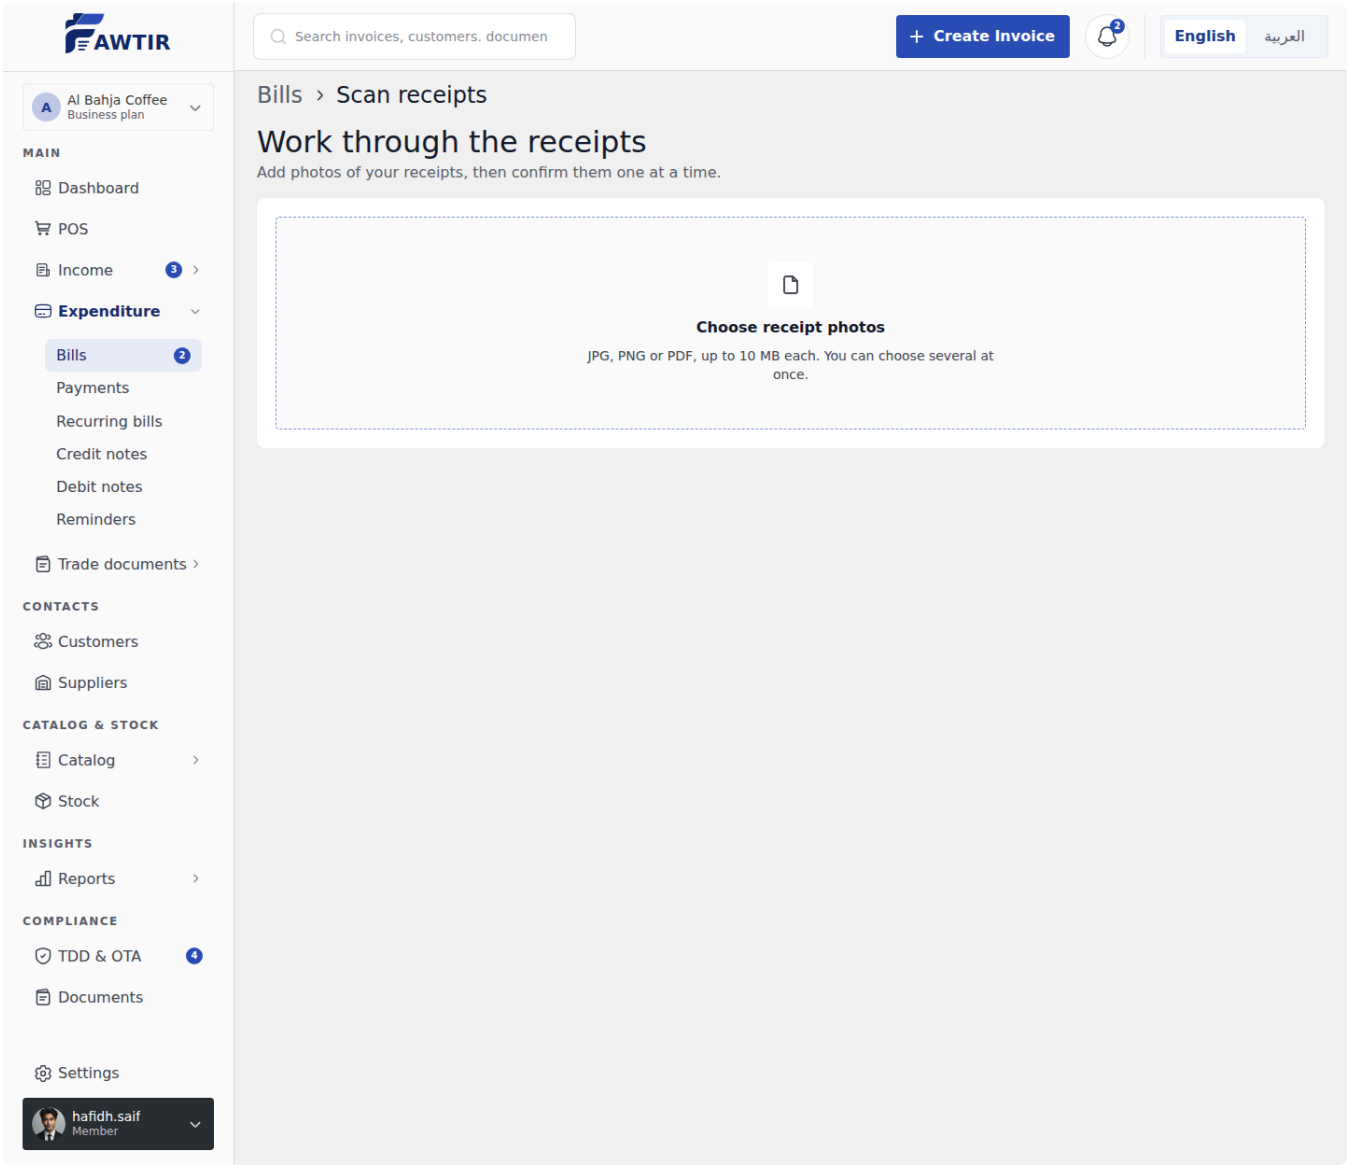

Matching to a purchase order (`GET` / `PUT` / `DELETE /v1/bills/{id}/match`) is web only. On mobile, show the match as read-only: if `match.verdict` is `MISMATCH`, show the **Mismatch** badge and the line "This bill doesn't match its order. Resolve it on the web." Hide Record payment for such a bill (the server would refuse it with `BILL_PAYMENT_MISMATCHED`: "That bill doesn't match its order."). Show `match.purchaseOrderNumber` when there is one.

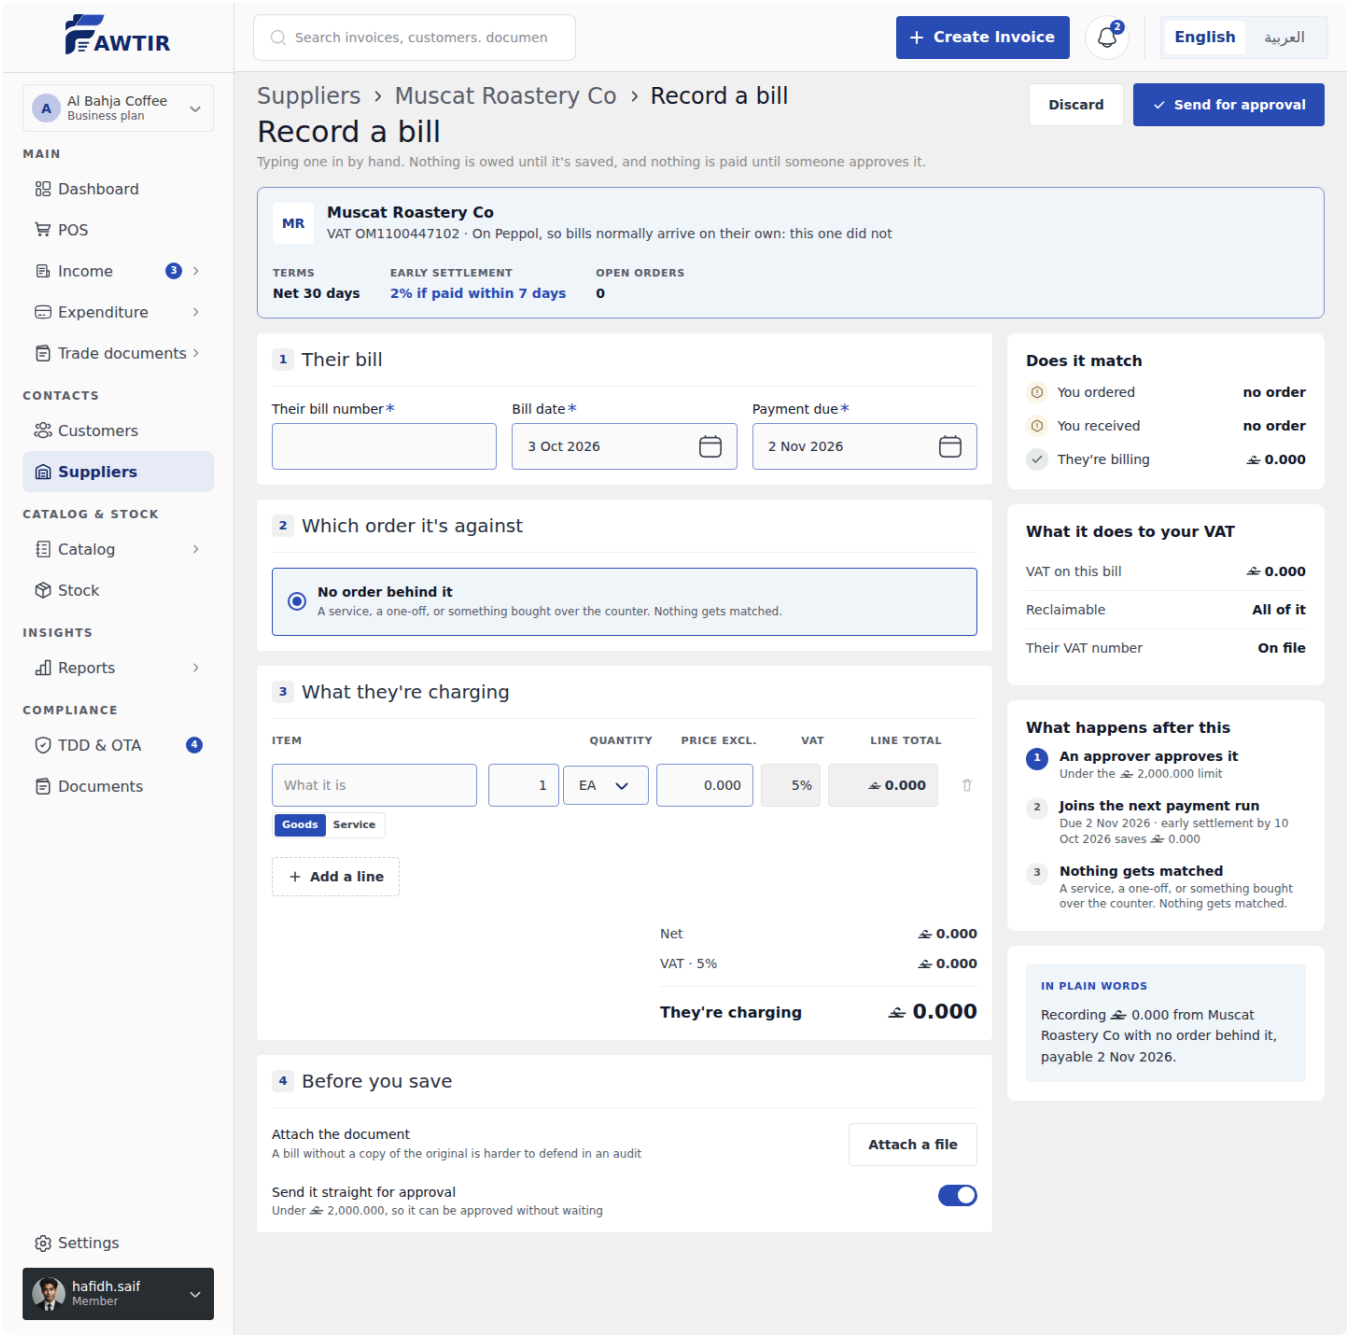

3. Getting a bill in

Three ways, all needing `invoice.payment.manage`. Peppol bills arrive by themselves and need none of this.

Way	Screen	Calls
Upload a bill	Upload the supplier's file, then type or check the details	Upload (3.1), then confirm (3.4)
Scan a receipt	Photo of a receipt paid on the spot	Upload with `source=SCANNED` (3.1), then confirm (3.4) with `paidOnTheSpot`
Record a bill (from a supplier's page)	Type it in, file optional	With a file: 3.1 then 3.4. Without: `POST /v1/bills` (3.5)

Bills › Scan receipts
Work through the receipts
Add photos of your receipts, then confirm them one at a time.
Choose receipt photos
JPG, PNG or PDF, up to 10 MB each. You can choose several at once.

#	Call	Notes
3.1	`POST /v1/bills/intake?source=UPLOADED` or `SCANNED`	Multipart field `file`. PDF, JPG, PNG or UBL XML, max 10 MB. Answer: `{id, filename, extractionStatus, extracted, documentTypeCode, ...}`

#	Call	Notes
3.2	`GET /v1/bills/intake/{id}`, `PUT /v1/bills/intake/{id}` (save for later: `{extracted, documentTypeCode}`), `DELETE /v1/bills/intake/{id}` (discard)	Reopen, save or drop an unconfirmed upload
3.3	`GET /v1/bills/intake?status=UNCONFIRMED&source=&page=&page_size=`	The unconfirmed list
3.4	`POST /v1/bills/intake/{id}/confirm`	Turns the upload into a bill. Answer `{id, supplierBillNumber, totalIncludingVat, currencyCode}`: open the bill
3.5	`POST /v1/bills`, header `Idempotency-Key: bill-<uuid>`	Same body as 3.4, no file. Same body reuses the same key; a changed body gets a new one

Nothing is read from a photo or PDF. Only an e-invoice XML fills `extracted` (`supplierName`, `supplierVatNumber`, `billNumber`, `issueDate`, `dueDate`, `currency`, `net`, `vat`, `total`, `lines[]`). For a PDF or photo the user types everything.

Confirm body (3.4 and 3.5):

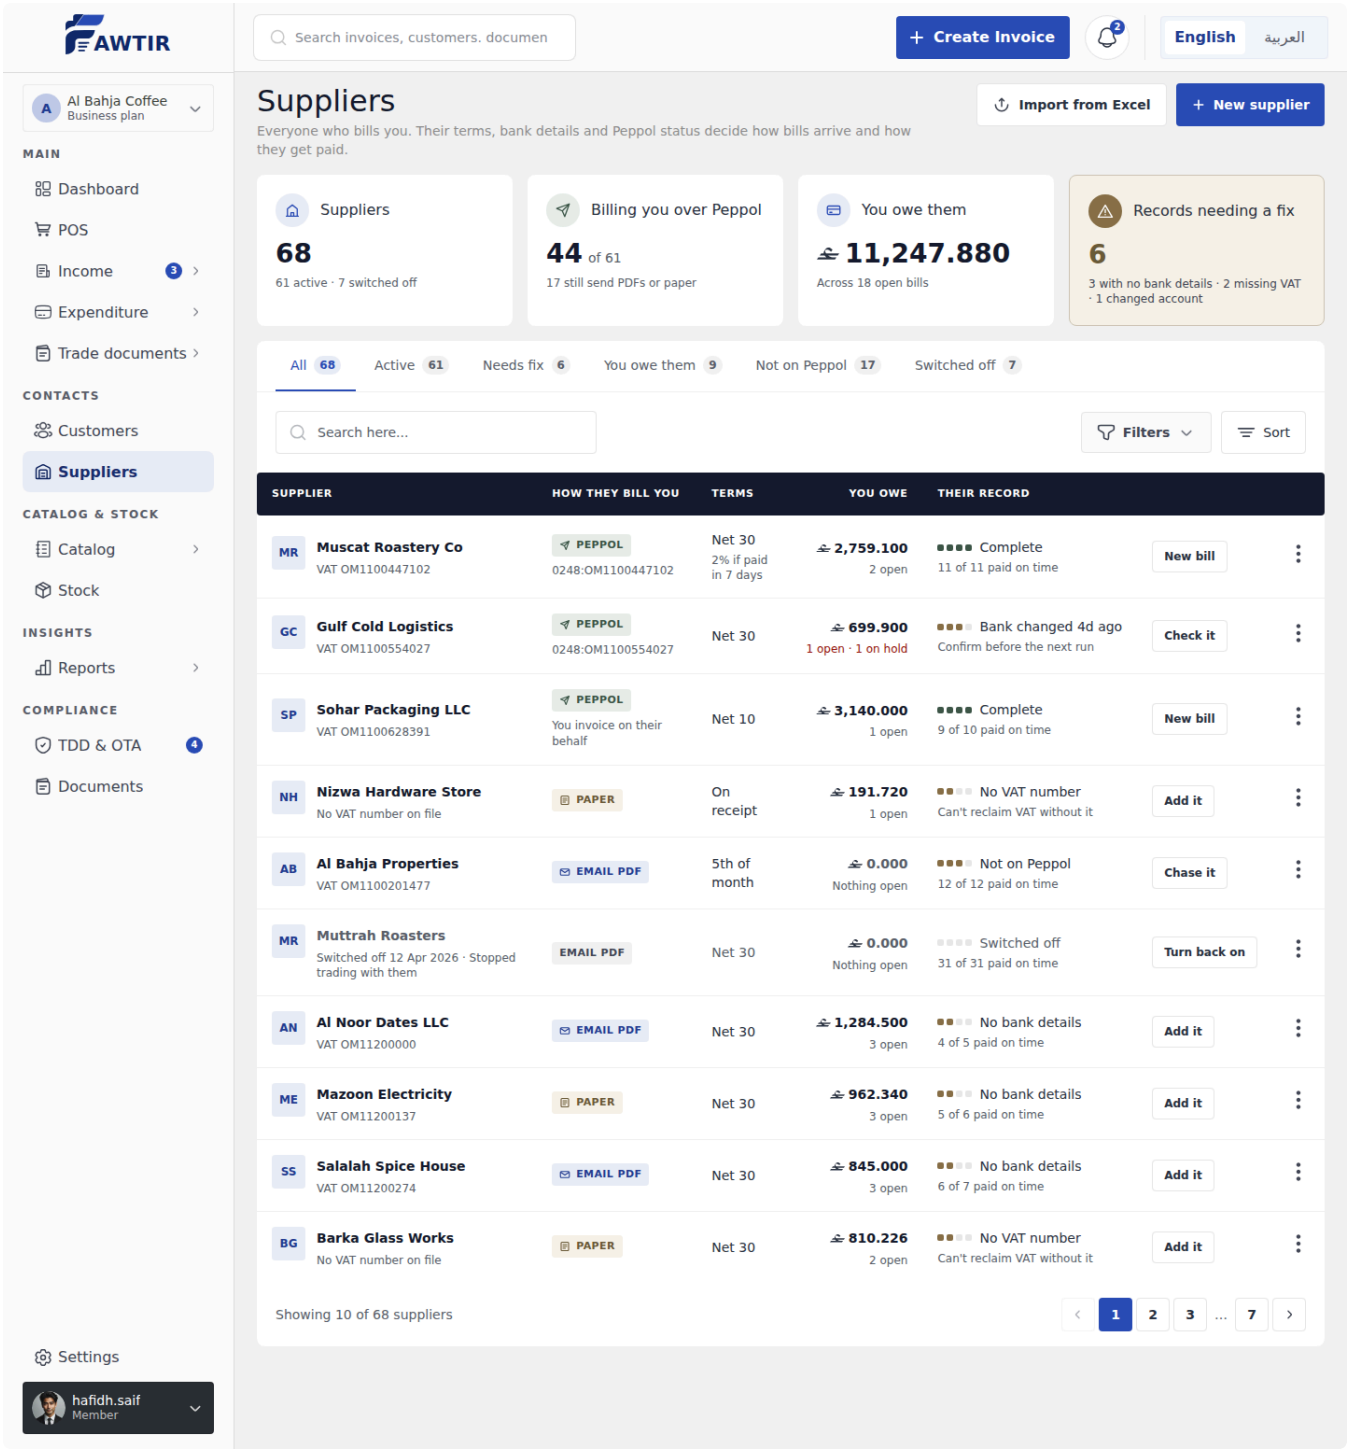

- `supplierId`, or `supplierName` when the supplier is not on the list (one is required).
- `documentTypeCode`: `380` bill (default), `381` credit note, `383` debit note.
- `billNumber` (required on bills, optional on receipts), `issueDate` (required), `dueDate` (not before the issue date), `currency` (required), `vat`, `total`.
- `lines[] {description, quantity, unit, unitPrice, vatRate, taxCategoryCode (S5, Z0, E0, O0), lineNet}`.
- `purchaseOrderId` or `null`; `goodsReceiptId: null`; `purchaseOrderReference: null`; `category` (receipts: "Repairs & maintenance", "Kitchen supplies", "Office supplies", "Vehicle & fuel", "Travel", "Utilities", "Marketing", "Professional fees").
- `paidOnTheSpot`: receipts only, `{methodCode: "10" cash or "48" card, paymentReference: null, paidOn, pettyCash?: true}`. Petty cash is cash (`10`) with `pettyCash: true`.
- `taxCategoryCode` (whole receipt), `note` (max 500, only when typed), `notDuplicateOf` (see below).

- Number formats: money up to 15 digits and 3 decimals; quantity up to 12 digits and 6 decimals; VAT not above the total.

Possible duplicate. A 409 with `error: BILL_INTAKE_POSSIBLE_DUPLICATE` carries `duplicateOf {billId, supplierBillNumber, issueDate, total, currencyCode, source}`. Ask "This may be a bill you already have", offer "Open that bill" or "It's a different bill. Save it"; the second resends with `notDuplicateOf: <billId>`.

4. Suppliers list

Everyone the company buys from: cards, tabs, one row per supplier. Opening it needs `supplier.read`.

#	Call	Notes
4.1	`GET /v1/suppliers?filter=&q=&sort=&channel=&page=&page_size=`	`filter`: `ACTIVE`, `NEEDS_FIX`, `OWED`, `NOT_ON_PEPPOL`, `SWITCHED_OFF`; leave out for All. `sort`: `OWED_DESC`, `OWED_ASC`; leave out for name. `channel`: `PEPPOL`, `EMAIL_PDF`, `PAPER`, `MANUAL`. Web page size 10. A supplier picker uses `filter=ACTIVE&page_size=20`
4.2	`GET /v1/suppliers/summary`	`total`, `active`, `switchedOff`, `onPeppol`, `notOnPeppol`, `owedTotal`, `openBills`, `owedSuppliers`, `needsFixSuppliers`, `needsFix {noBankDetails, noVat, bankChanged}`

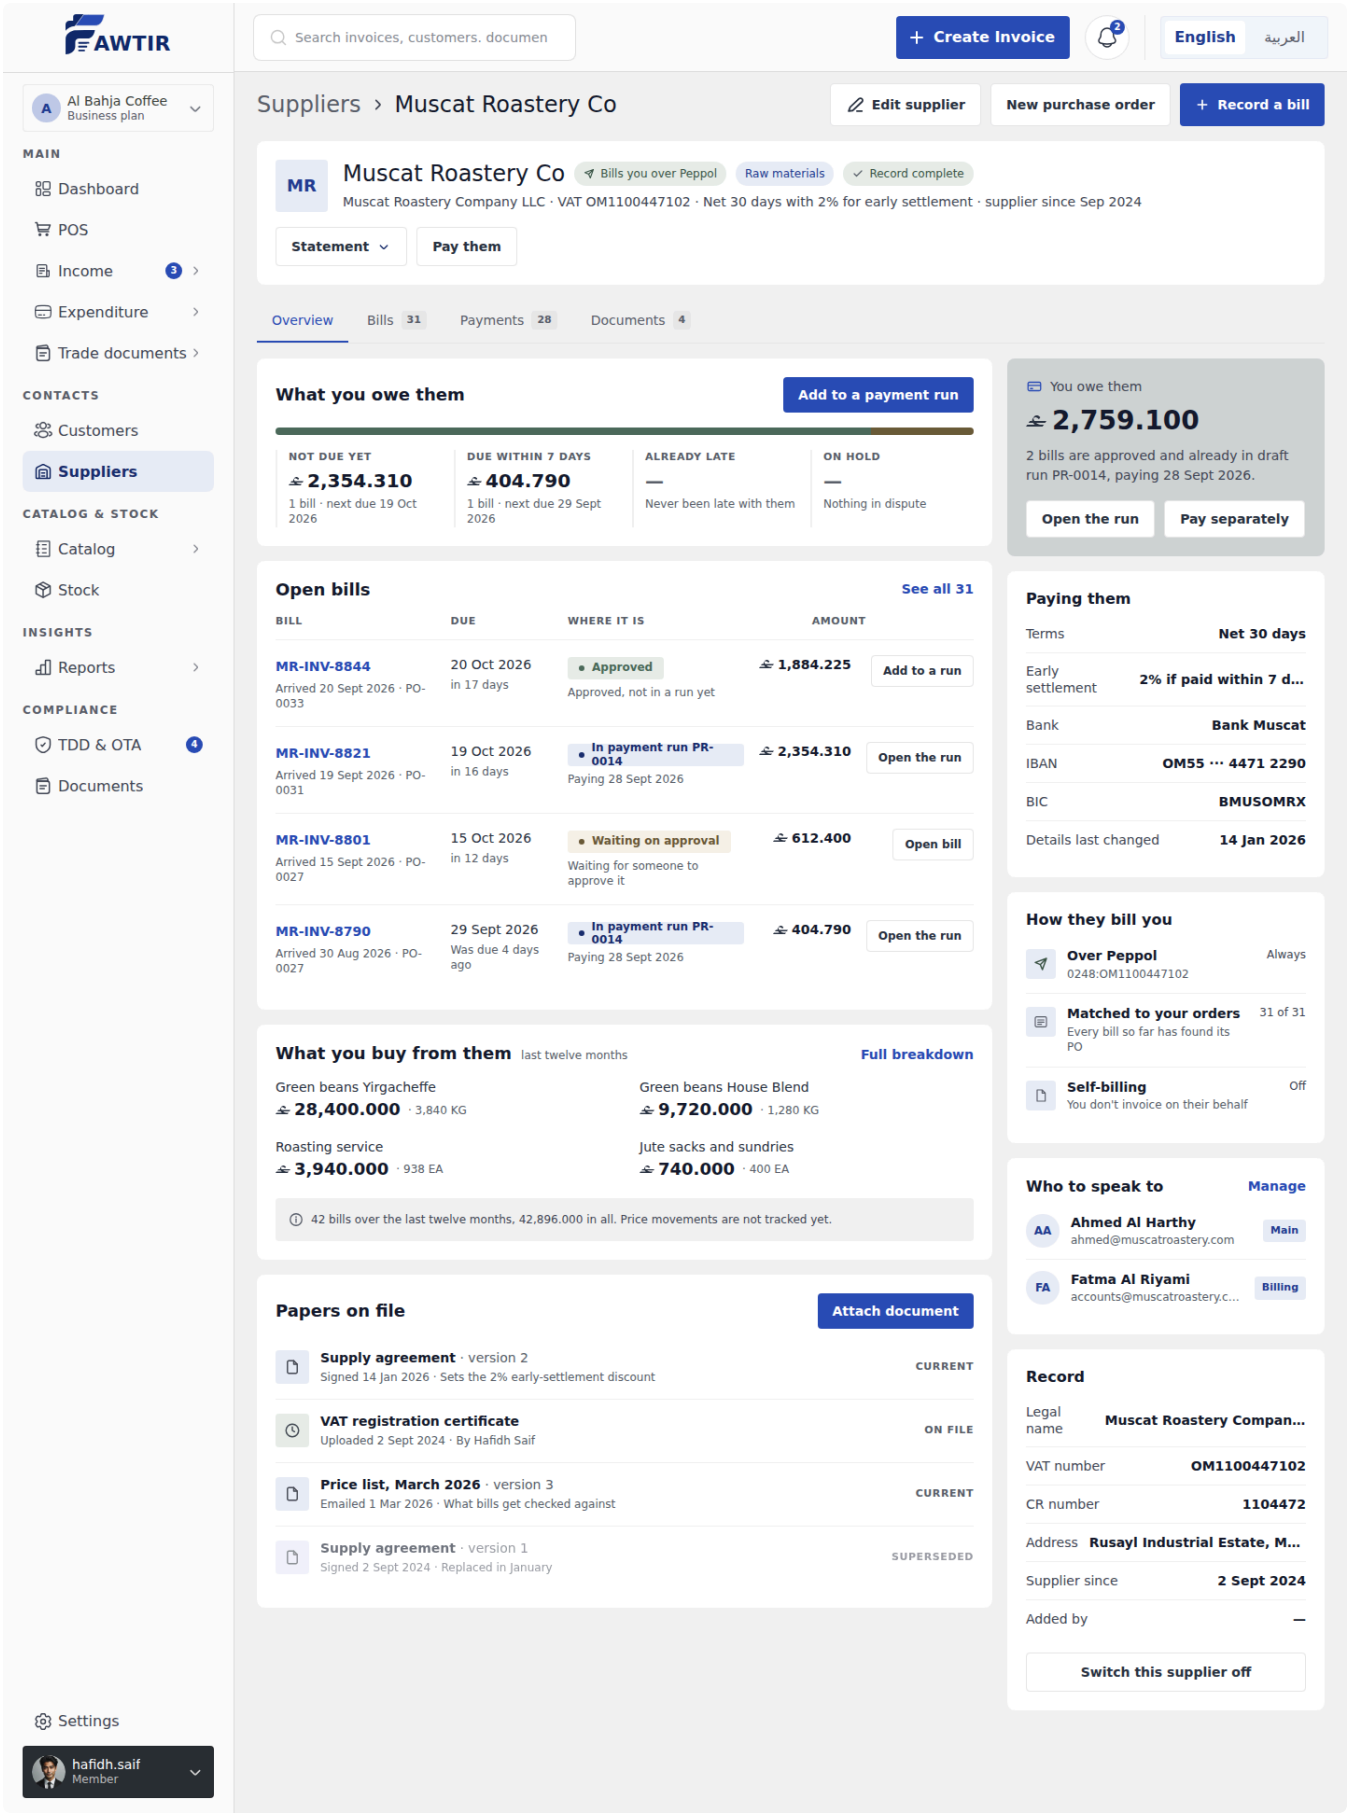

Row fields: `id`, `displayName`, `vatNumber`, `billingChannel`, `participantId` (`0248:…`), `selfBilling`, `terms {paymentTerms, netDays, earlyPaymentDiscountPercent, earlyPaymentDiscountDays}`, `youOwe {amount, currency, openBills, onHold}`, `record {health[], paidOnTime}`, `status` (`ACTIVE` or `SWITCHED_OFF`), `switchedOffAt`, `switchedOffReason`.

`health[]` flags what needs fixing: `NO_BANK_DETAILS`, `NO_VAT_NUMBER`, `BANK_CHANGED_UNCONFIRMED`. A switched-off row shows "Switched off {date} · {reason}" on one line.

Row actions: Record a bill (`invoice.payment.manage`, hidden for a switched-off supplier); New supplier, fixes and Switch back on (`supplier.manage`). Payment runs and purchase orders are web only.

5. Supplier detail and statement

One supplier: what you owe them, open bills, how you pay them, contacts, papers on file. All reads need `supplier.read`.

#	Call	Used for
5.1	`GET /v1/suppliers/{id}`	The record: `profile` (legal and trading name, VAT, Peppol ID, terms, bank details, contact, tags, `health[]`, `status`, `switchedOffAt`, `switchedOffReason`, `switchedOffNote`, `version`), addresses
5.2	`GET /v1/suppliers/{id}/overview`	Tab counts `tabs {bills, payments, documents, openBills}`; what you owe `payables {notDue, dueSoon, late, onHold, total}`, each `{amount, bills, nextDue}` (due soon = within 7 days)
5.3	`GET /v1/suppliers/{id}/bills?open=true&page=0&page_size=20`	Open bills card (bill rows as in section 1). Leave out `open` for the Bills tab
5.4	`GET /v1/suppliers/{id}/payments?page=&page_size=`	Payments tab: `{billId, entryType, amount, currency, methodCode, paymentReference, paymentDate}`
5.5	`GET /v1/suppliers/{id}/contacts`	Who to speak to: `{fullName, roleTitle, purpose (MAIN, BILLING, DELIVERY, OTHER), email, telephone, mobilePhone}`
5.6	`GET /v1/suppliers/{id}/documents`, `GET …/documents/{docId}/content`	Papers on file, and download one
5.7	`POST /v1/suppliers/{id}/documents`	Attach a paper (`supplier.manage`): multipart `file`, `title`, `kind`, optional `series`, `documentDate`, `note`, `keep`. Max 10 MB

Paper `kind`: `AGREEMENT`, `CERTIFICATE`, `PRICE_LIST`, `CORRESPONDENCE`, `OTHER`, `BILL`, `CREDIT_NOTE`, `DEBIT_NOTE`. `keep`: `UNTIL_DELETED` or `TEN_YEAR_RULE`; bills, credit notes and debit notes are always `TEN_YEAR_RULE`.

Bank change. When `health` includes `BANK_CHANGED_UNCONFIRMED`, offer "Confirm the new bank details": `POST /v1/suppliers/{id}/bank-details/confirm` (`supplier.manage`).

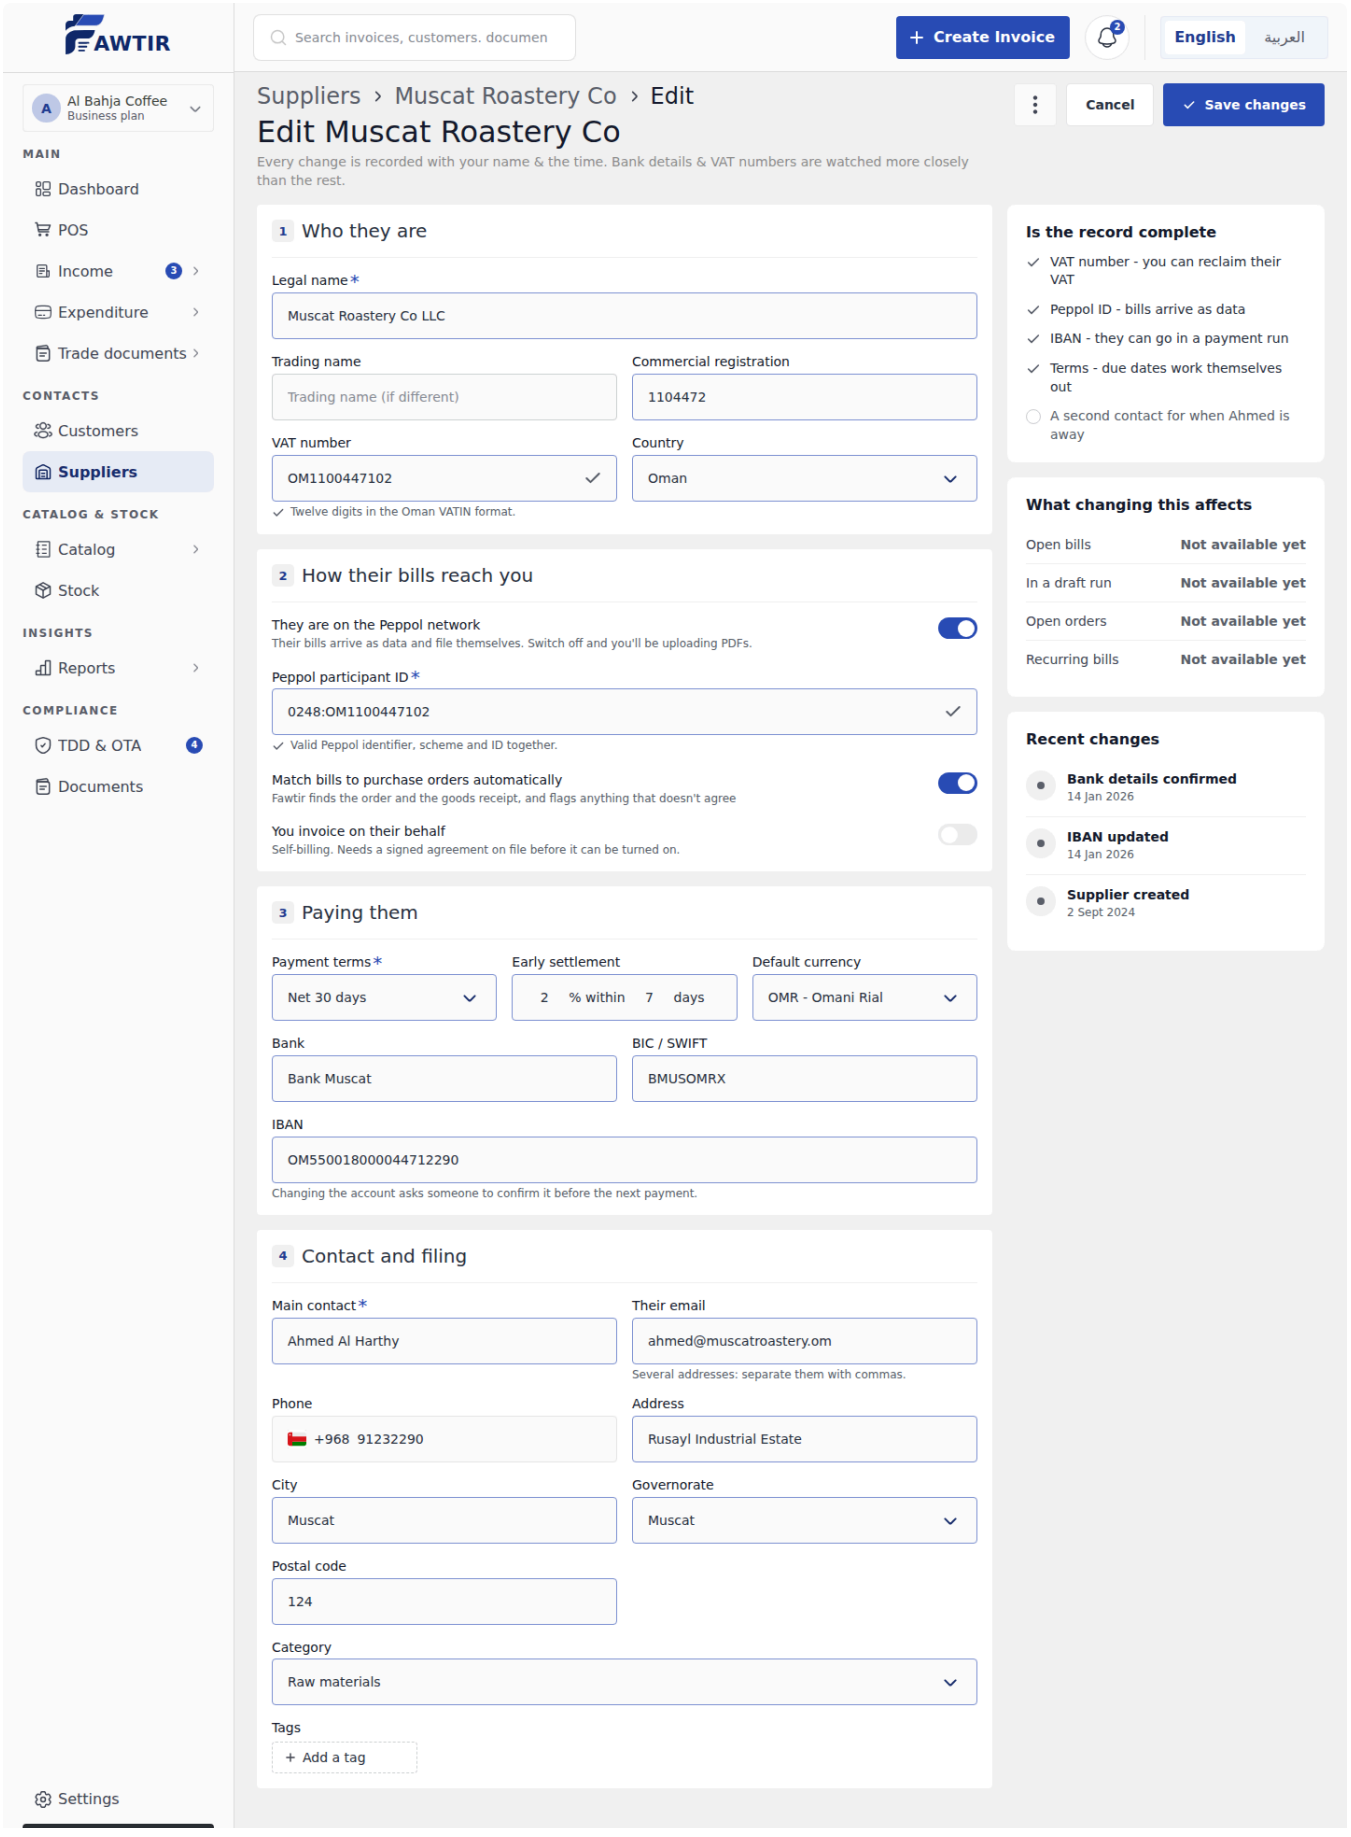

Statement

#	Call	Notes
5.8	`GET /v1/suppliers/{id}/statement?from=&to=`	Default period: this year. `{opening, bills, credits, payments, closing, entries[] {date, kind (BILL, CREDIT_NOTE, PAYMENT, REVERSAL), reference, amount, runningBalance}, ageing {NOT_DUE, DUE_WITHIN_30, LATE_30, LATE_60_PLUS}}`
5.9	`GET /v1/suppliers/{id}/statement.pdf?from=&to=` (or `.xlsx`)	Download
5.10	`POST /v1/suppliers/{id}/statement/email?from=&to=`, body `{recipient}`	Needs `supplier.manage`. The address must already be on the supplier's record

6. New or edit supplier, switch off

All of this needs `supplier.manage`.

2 How their bills reach you
They are on the Peppol network
Their bills arrive as data and file themselves. Switch off and you'll be uploading PDFs.
Peppol participant ID*
0248:OM1100447102
Valid Peppol identifier, scheme and ID together.
Match bills to purchase orders automatically
Fawtir finds the order and the goods receipt, and flags anything that doesn't agree
You invoice on their behalf
Self-billing. Needs a signed agreement on file before it can be turned on.
3 Paying them
Payment terms*
Net 30 days
Early settlement
2 % within 7 days
Default currency
OMR - Omani Rial
Bank
Bank Muscat
BIC / SWIFT
BMUSOMRX
IBAN
OM550018000044712290
Changing the account asks someone to confirm it before the next payment.
4 Contact and filing
Main contact*
Ahmed Al Harthy
Their email
ahmed@muscatroastery.om
Several addresses: separate them with commas.
Phone
+968 91232290
Address
Rusayl Industrial Estate
City
Muscat
Governorate
Muscat
Postal code
124
Category
Raw materials
Tags

#	Call	Notes
6.1	`POST /v1/suppliers`, header `Idempotency-Key: supplier-<uuid>`	New supplier. Answer: the record (5.1)
6.2	`PUT /v1/suppliers/{id}`	Edit. Sends the whole record plus `version` from 5.1. Leaving `bankDetails` out keeps the stored account
6.3	`POST /v1/suppliers/{id}/switch-off`, body `{reason, note}`	`reason`: `STOPPED_TRADING`, `CLOSED_DOWN`, `DUPLICATE`, `MOVED_SUPPLIER`, `SOMETHING_ELSE` or `null`; `note` max 500 or `null`. Also pauses the supplier's recurring bills
6.4	`POST /v1/suppliers/{id}/switch-on`, no body	Switch back on; clears the reason and note

Body (6.1 and 6.2):

- `type`: `BUSINESS` or `GOVERNMENT`. `legalName`, `tradingName` (blank clears it), `commercialRegistrationNumber` (max 20), `supplierCategory`, `tags[]` (max 20, each max 40), `notes`.
- `vatNumber`: upper-cased, `OM11` or `OM12` + 8 digits; `registeredForVat` = a VAT number is set.
- Peppol: `registeredOnPeppol`, `participantScheme`, `participantValue`. With scheme `0248` the value is `OM11` + 8 digits; an `OM12` group number is refused. Show it as `0248:` + value.
- Paying them: `defaultCurrency` (`OMR`), `defaultTaxCategory` (`S5`), `paymentTerms`, `defaultPaymentMethod` (`30`), `earlyPaymentDiscountPercent` (0 to 100) and `earlyPaymentDiscountDays` (both or neither), `requiresApprovalBeforePayment`.
- `bankDetails`: `{beneficiaryName, iban, bic, bankName}`. IBAN upper-cased without spaces, `^[A-Z]{2}[0-9]{2}[A-Z0-9]{11,30}$`; BIC 8 or 11 characters. Send only when changed.
- Contact: `contactPerson`, `roleTitle`, `emailRecipients[]` (max 10, no duplicates), `telephone` and `mobilePhone` (international form, e.g. `+96824000000`), `preferredLanguage` (`en` or `ar`).

- `receivingChannel`: `PEPPOL` when on Peppol, else `EMAIL_PDF`, `PAPER` or `MANUAL`. `autoMatchPurchaseOrders` (stored only).
- Addresses: `invoiceAddress`, `sameAsInvoicingAddress`, `deliveryAddress`, each `{attention, countryCode, cityName, countrySubentity, streetName, buildingNumber, additionalStreetName, poBox, postalCode}`.

Copy into a new supplier is done on the device: load the supplier (5.1), clear `vatNumber`, `commercialRegistrationNumber`, the Peppol ID, `iban`, `bic` and `bankName`, and open the new-supplier form with the rest.

Saving errors. `errors[]` with `field` and `code` (`REQUIRED`, `TOO_LONG`, `INVALID_FORMAT`, `INVALID_CHARACTERS`, `VAT_GROUP_NOT_A_PARTICIPANT`, `DUPLICATE`, `TOO_MANY`, `OUT_OF_RANGE`). A 409 on create: "Another supplier or customer already uses this VAT number or Peppol ID." A 409 on edit: someone changed it, or the VAT/Peppol ID is taken; reload.

7. Error codes and checklist

Read the code from `error` in the answer. The web's English and Arabic for each is in `src/i18n/locales/en.json` and `ar.json`; the map is in `src/lib/expenditureRefusals.ts`. An unknown code: show a general refusal with the `trace_id`.

Area	Code	What to tell the user
Approve, reject	`APPROVAL_ALREADY_GIVEN`	You have already approved this bill. It needs a different approver.
Approve, reject, hold	`APPROVAL_TRANSITION_INVALID`, `BILL_HOLD_ALREADY_OPEN`, `BILL_HOLD_NOT_OPEN`	This bill changed after the page loaded. It has been refreshed. Try again.
Reject	`APPROVAL_REJECTION_REASON_REQUIRED`	A rejection needs a reason.

Area	Code	What to tell the user
Reject	`APPROVAL_REJECT_PAYMENT_RECORDED`	A payment is already recorded on this bill, so it can no longer be rejected.
Reject	`APPROVAL_REJECT_IN_PAYMENT_RUN`	This bill is in payment run {run}. Take it out of the run before rejecting it.
Reject	`APPROVAL_REASON_TOO_LONG`	That reason is too long. Shorten it and reject again.
Hold	`BILL_HOLD_ON_PAID_REFUSED`	A bill that is paid cannot be put on hold.
Hold	`BILL_HOLD_NOT_PAYABLE`	Nothing is owed on this bill, so it cannot be put on hold.
Hold	`BILL_HOLD_REASON_REQUIRED`	A hold has to say why.
Hold	`BILL_HOLD_REASON_TOO_LONG`	That reason is too long. Shorten it and put the bill on hold again.
Nudge	`BILL_NUDGE_ALREADY_SENT`	A reminder for this bill was already sent today. You can send another tomorrow.
Nudge	`BILL_APPROVAL_NOT_PENDING`	This bill is no longer waiting for approval. Reload to see where it is.
Nudge	`BILL_NUDGE_NO_APPROVER`	Nobody on this account can approve this bill. Check the approval rules in Settings.
Nudge	`BILL_NUDGE_DELIVERY_UNAVAILABLE`	Bill reminders are not switched on, so nobody was told.

Area	Code	What to tell the user
Payment	`BILL_NOT_READY_FOR_PAYMENT`	This bill has not been approved yet. Approve it, then record the payment.
Payment	`BILL_PAYMENT_ON_HOLD`	This bill is on hold. Release it, then record the payment.
Payment	`BILL_PAYMENT_MISMATCHED`	That bill doesn't match its order.
Payment	`BILL_PAYMENT_EXCEEDS_OUTSTANDING`	That is more than this bill still owes. The most you can record is {amount}.
Payment	`BILL_PAYMENT_IN_PAYMENT_RUN`	This bill is in payment run {run}. Pay it there, or take it out of the run first. (`paymentRunReference` in the answer)
Payment	`BILL_PAYMENT_AMOUNT_SCALE_INVALID`	Use no more than 3 decimals.
Payment	`BILL_PAYMENT_DATE_IN_FUTURE`	A payment cannot be dated in the future.
Payment	`BILL_PAYMENT_CURRENCY_MISMATCH`	The payment and the bill are in different currencies.
Any	`BILL_NOT_FOUND`	That bill is not on this account. It may have been removed.
Upload	`BILL_INTAKE_TOO_LARGE`	That file is larger than 10 MB.
Upload	`BILL_INTAKE_TYPE_UNSUPPORTED`	Use a PDF, JPG, PNG or XML file.
Upload	`BILL_INTAKE_EMPTY`	That file is empty.
Upload	`BILL_INTAKE_FILE_REQUIRED`	Choose the bill's file first.

Area	Code	What to tell the user
Confirm	`BILL_INTAKE_SUPPLIER_REQUIRED`	Choose a supplier, or use the name as written on the bill.
Confirm	`BILL_INTAKE_SUPPLIER_UNKNOWN`	That supplier is not on your list any more. Choose another.
Confirm	`BILL_INTAKE_TOTAL_INVALID`, `BILL_INTAKE_VAT_INVALID`	Enter an amount of zero or more, with up to 3 decimals.
Confirm	`BILL_INTAKE_ALREADY_CONFIRMED`	This file was already saved as a bill.
Confirm	`BILL_INTAKE_NOT_FOUND`	This upload is no longer there. Upload the file again.
Confirm	`BILL_INTAKE_PAYMENT_AMOUNT_INVALID`	A bill paid on the spot needs a total above zero.
Confirm	`BILL_INTAKE_PAYMENT_METHOD_REQUIRED`	Choose how this bill was paid.
Confirm	`BILL_INTAKE_PETTY_CASH_NOT_CASH`	Petty cash can only be recorded as cash.
Confirm	`BILL_NOTE_TOO_LONG`	That note is too long. Keep it to 500 characters or fewer.
Confirm	`PURCHASE_ORDER_NOT_FOUND`	That purchase order is not on this account. Choose another, or save the bill without one.
Confirm	`BILL_TAX_CATEGORY_INVALID`	That VAT category cannot be used on a bill. Choose another.

Area	Code	What to tell the user
Confirm	`BILL_TAX_CATEGORY_RATE_MISMATCH`	That VAT rate does not match the VAT category. Choose the rate that goes with it.
Confirm, statement	`SUPPLIER_SWITCHED_OFF`	This supplier is switched off. Switch it back on to record a bill for it.
Statement e-mail	`SUPPLIER_STATEMENT_NO_EMAIL_ADDRESS`	This supplier has no email address on file. Add one on their page.
Statement e-mail	`SUPPLIER_STATEMENT_RECIPIENT_NOT_ON_RECORD`	{address} is not on this supplier's record. Choose an address from the list, or add it on their page.
Statement e-mail	`SUPPLIER_STATEMENT_PERIOD_INVALID`	The start date is after the end date. Fix the period, then send.
Statement e-mail	`SUPPLIER_STATEMENT_EMAIL_NOT_SWITCHED_ON`	Email isn't switched on. Download the statement and send it yourself.
Statement e-mail	`SUPPLIER_STATEMENT_SEND_FAILED` (503)	The statement could not be sent just now. Try again, or download it and send it yourself.

Checklist

- [ ] Bills list: six tabs, cards from the summary, unconfirmed uploads on Needs attention
- [ ] Approved bill with an unresolved mismatch reads Mismatch, and can't be paid
- [ ] Bill detail actions shown only when allowed (hidden, not disabled)
- [ ] Record payment with idempotency key reused on retry
- [ ] Upload and scan: file first, then confirm; no reading of photos or PDFs
- [ ] Receipts: paid on the spot, petty cash as cash, note up to 500
- [ ] Possible duplicate handled with `notDuplicateOf`

- [ ] Suppliers list tabs, needs-fix flags, switched-off line
- [ ] Supplier detail, open bills, contacts, papers, statement download and e-mail
- [ ] New and edit supplier with `version`; copy clears VAT, CR, Peppol ID and bank
- [ ] Switch off with a reason and note; switch back on
- [ ] English and Arabic for every label; money with the rial sign, three decimals

Open points: sign-in for mobile (token instead of cookies) is the same open question as in the invoice API doc. No page-size limit is stated by the server; use 10 or 20.
